Congratulations! Your new BRAVIA TV opens the door to a “Full HD Experience.” This guide will explain how to get the most from your new High Definition TV.

Please take these steps before you power up your BRAVIA:

- Register online at: http://www.sony.com/registration (from U.S.A.) http://www.sony.ca/registration (from Canada)
- Make sure you’ve removed all accessory contents from packaging
- Install 2 AA batteries (supplied separately) in your remote control
- Determine whether you will mount your TV on a wall or place it on a floor stand. Sony wall-mounting brackets are designed to provide the best fit.
- Give your TV 2 ½ inches (6 cm) of space behind it to properly ventilate.

The Four Steps to a Full HD Experience: Set, Sound, Source, and Setup

Along with your BRAVIA TV set, a complete HD system requires an HD sound system, a source of HD content, and proper setup connections with components such as your HD cable or satellite box.

To get your HD programming to experience the stunning detail of HDR:

The quality of the image you see on your BRAVIA can only be as high as the quality of the signal it is displaying. This chart shows the different signal types and how to access them.

### Watching Your TV

**Remote Control and XMB**

Press HOME to display the XMB (XrossMediaBar).

**XMB** (XrossMediaBar) with focus on Settings
- Select Settings to customize your TV.

**XMB** (XrossMediaBar) with focus on TV turn on
- Select TV turn on or use the 0-9 number buttons on your remote control.

**XMB** (XrossMediaBar) with focus on External Inputs
- Select connected device from here or use the INPUT button on your remote control.

**XMB** (XrossMediaBar) with focus on Show/Hide Channels
- Press HOME on your remote control to display the TV Guide, and use the Cursor buttons to select your channel. Press OK to continue.
- Use the OPTIONS button to quickly access Picture Adjustments and Sound Adjustments.
- Refer to your BRAVIA Operating Instructions Manual for more information.

**Adjust Screen Shape and Aspect Ratio**

High Definition and Standard Definition signals are transmitted with different aspect ratios (the width-to-height shape of the image). Most HD signals use a widescreen aspect ratio of 16:9. Most SD signals use a boxy 4:3 aspect ratio. The 16:9 aspect ratio looks perfect on your BRAVIA, but a 4:3 image may need to be adjusted to better fill the wide screen of your BRAVIA.

- Adjust your TV so boxy 4:3 images are automatically re-configured (zoomed or stretched) to fit the wide TV screen. OR
- Watch SD content in its original, boxy format with wide black bars surrounding the image to fill an unused space (for example, you may prefer to watch an old classic movie in its original 4:3 format, not recomagnified for a wide screen).

Press WIDE on your remote control. Your TV will display available wide modes for the current signal. Select the Wide Mode setting of your preference.

**To Do List**

When the Initial Setup is completed, consider carrying out these items:
- Set Closed Captions (CC)
- Set Parent Lock
- Show/Hide Channels
- Set Speakers
- Manage Inputs (Label/Enable Inputs)
- Set Lock
- Manage Inputs

For details, refer to your BRAVIA Operating Instructions Manual.

**Favorites**

Use the Favorites feature to manage your favorite channels and inputs for easy access.

- Press FAVORITES to access Favorites.
- To Favorites, you will see a list of your most recently viewed channels and external inputs. Highlight a channel or external input and press OK to stop at it.
- Add a channel or external input to your Favorites list; name it and press OPTIONS, then select Add to Favorites.
- Use the Operating Instructions Manual for more details on this feature.

**Running Initial Setup**

Run the Initial Setup to scan for the available analog and digital channels after connecting your signal source to the CABLE/ANTENNA input on the rear of the TV.

1. The Initial Setup screen will appear when your BRAVIA is powered on for the first time. Select the language for the OSD (on-screen display) from the screen below.

2. Follow the instructions provided on the screen. Note: If you are using a cable or satellite box, select the Skip option to skip the Auto Program.

3. When all receivable channels are found, press OK to continue to set the current time.

4. Continue on to set up the TV Guide On Screen. If you are not using a cable or satellite box, follow the on-screen instruction to set up your system.

**What is HDMI?**

HDMI (High-Definition Multimedia Interface) cables are the standard for connecting HD TV. They are built to properly handle high-bandwidth, uncompressed video and multi-channel audio—all in one cable.

**Connecting a PC to Your BRAVIA**

- May require DVI-to-HDMI adapter and separate audio connector.
- Contact PC’s audio output when using a Digital Video Interface (DVI) or HDMI connection.
- Press FUNCTION + Select Output to transmit to TV.
- When using an HDMI connection, adjust TV’s Pitch and Phase to prevent sharpness.
- Refer to your BRAVIA Operating Instructions Manual for more information.

Notes on Connection:

- Your TV is equipped with four HDMI inputs. Connect your incoming signal source (HD Cable Box, HD Satellite Receiver, or DVD) with HDMI or component video for the best possible picture quality.
- If your connecting equipment has DVI output instead of the HDMI output, you must use a DVI-to-HDMI cable for the video and also connect an audio cable for the sound. If this is the case, connect the cable to HDMI IN 4 (input) of your TV.
- P&P/PIP functions require Cable/Antenna connection.
- When receiving a high-definition signal by an over-the-air antenna, it is best to use an HD antenna.
- When using a DVI-to-HDMI cable, make sure to connect the DVI side first.
