English

Recording from Various Sound Sources (see Fig. C-④)

Connect headphones/earphones to monitor the recorded sound. Set VOR to suit the recording condition before recording.

Recording with the supplied Microphone (see Fig. C-④)

Connect the supplied "Supervisional microphone" (monaural) to the MIC jack and direct the microphone to the sound source.

Note

The supplied microphone will pick up noise if it is hand held while recording. Place the microphone on a flat surface.

To use the stand (see Fig. C-⑤)

If the stand gets detached (see Fig. C-④)

Attach the stand as shown.

Recording with an External Microphone

Connect a microphone to the MIC jack. Use a microphone of low impedance (less than 3 kilohms) such as ECM-TS120 (not supplied). When using a plug-in-power system microphone, the power to the microphone is supplied from this unit.

Recording from Another Equipment

Connect another equipment to the MIC jack using the RK-G128HG (stereo miniplug ↔ two phone plugs) or RK-G134HG (stereo miniplug ↔ stereo miniplug) connecting cord (not supplied).

Notes on recording with a microphone or external sources

- When the MIC jack is plugged in, the built-in stereo microphone is switched off automatically and recording input switches automatically to the connected source.
- When recording with an external microphone, the VOR system may not work properly due to difference in sensitivity.

- Press PLAY and then adjust the volume. The raised dot beside VOL shows the direction to turn down the volume. Playback will start from the forward side and switches automatically to the reverse side at the end of the side (Auto Reverse).

- Adjust the tape playback speed. Turn SPEED CONTROL to: SLOW (slow) to play back at a slower speed. Center position to play back at normal speed. FAST (fast) to play back at a faster speed.

At the end of the tape, playback stops and the unit turns off automatically.

On tapes longer than 90 minutes

We do not recommend the use of tapes longer than 90 minutes except for a long continuous recording or playback. They are very thin and tend to stretch easily.

If you have any questions or problems concerning your unit, please consult your nearest Sony dealer.

To the stand (see Fig. C-⑤)

Attach the stand as shown.

- Do not leave the unit in a location near heat sources, or in a place subject to direct sunlight, excessive dust or mechanical shock.
- Should any solid object or liquid fall into the unit, remove the batteries or disconnect the AC power adaptor, and have the unit checked by qualified personnel before operating it any further.

- Keep personal credit cards using magnetic coding or spring-wound watches etc. away from the unit to prevent possible damage from the magnet used for the speaker.
- If the unit has not been used for a long time, set it in the playback mode to warm it up for a few minutes before inserting a tape.

Recording cannot be made.

- Connection is made incorrectly.
- The batteries are weak.
- The record/playback head is contaminated.
- VOR has not been set properly when using VOR.

Recording is interrupted.

- VOR is set to H or L. When you do not use VOR, set it to OFF.

Recording cannot be erased completely.

- The erase head is contaminated.
- You are using a Hi-position (TYPE II) or metal (TYPE IV) tape.

Recording is interrupted.

- VOR is set to H or L. When you do not use VOR, set it to OFF.

Recording cannot be erased completely.

- The erase head is contaminated.
- You are using a Hi-position (TYPE II) or metal (TYPE IV) tape.

There is a clicking noise during tape operation.

- The tape counter button is not pressed properly. Press and reset the counter to "000".

Maintenance (see Fig. E)

To clean the tape heads and path

Wipe the heads, pinch roller, and the capstan with a cotton swab moistened with alcohol after every 10 hours of use.

To clean the exterior

Use a soft cloth slightly moistened in water. Do not use alcohol, benzine or thinner.

Troubleshooting

Should any problem persist after you have made these checks, consult your nearest Sony dealer.

You cannot press REC.

- The tab on the tape has been removed.

Playback cannot be made.

- The tape has reached the end of the reverse side. Press DIR → to switch playback side.

The unit does not operate.

- The batteries have been inserted with incorrect polarity.
- The batteries are weak.

- PAUSE → is slid in the direction of the arrow.
- The AC power adaptor is not firmly connected.

- When trying to run on dry batteries, the AC power adaptor has been left plugged to the DC IN 3V jack, but not to the power source.

Design and specifications are subject to change without notice.

- Do not leave the unit in a location near heat sources, or in a place subject to direct sunlight, excessive dust or mechanical shock.
- Improper setting of the REC TIME switch. Set it to the same speed as that used for recording.

SPEED CONTROL is set at a point other than the center.

The sound drops out or comes with excessive noise.

- The volume is turned down completely.
- The batteries are weak.

The heads are contaminated. See "Maintenance."

Recording cannot be made.

- The unit has not been used for a long time, set it in the playback mode to warm it up for a few minutes before inserting a tape.

Recording is interrupted.

- VOR is set to H or L. When you do not use VOR, set it to OFF.

Recording cannot be erased completely.

- The erase head is contaminated.
- You are using a Hi-position (TYPE II) or metal (TYPE IV) tape.
