Operating Instructions

Before operating the unit, please read this manual thoroughly and retain it for future reference.

VPL-HW50ES
WARNING

To reduce the risk of fire or electric shock, do not expose this apparatus to rain or moisture.

To avoid electrical shock, do not open the cabinet. Refer servicing to qualified personnel only.

THIS APPARATUS MUST BE EARTHED.

For the customers in the U.S.A. and Canada

WARNING:
Using this unit at a voltage other than 120 V may require the use of a different line cord or attachment plug, or both. To reduce the risk of fire or electric shock, refer servicing to qualified service personnel.

For the customers in the U.S.A.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:
- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

You are cautioned that any changes or modifications not expressly approved in this manual could void your authority to operate this equipment.

All interface cables used to connect peripherals must be shielded in order to comply with the limits for a digital device pursuant to Subpart B of part 15 of FCC Rules.

If you have any questions about this product, you may call; Sony Customer Information Service Center 1-800-222-7669 or http://www.sony.com/

For the customers in Canada

This Class B digital apparatus complies with Canadian ICES-003.

For the customers in Europe

This product has been manufactured by or on behalf of Sony Corporation, 1-7-1 Konan Minato-ku Tokyo, 108-0075 Japan.

Inquiries related to product compliance based on European Union legislation shall be addressed to the authorized representative, Sony Deutschland GmbH, Hedelfinger Strasse 61, 70327 Stuttgart, Germany. For any service or guarantee matters, please refer to the addresses.
provided in the separate service or guarantee documents.

**AVERTISSEMENT**

Afin de réduire les risques d’incendie ou d’électrocution, ne pas exposer cet appareil à la pluie ou à l’humidité.

Afin d’écarter tout risque d’électrocution, garder le coffret fermé. Ne confier l’entretien de l’appareil qu’à un personnel qualifié.

**CET APPAREIL DOIT ÊTRE RELIÉ À LA TERRE.**

Pour les clients au Canada
Cet appareil numérique de la classe B est conforme à la norme NMB-003 du Canada.

**Pour les clients en Europe**
Ce produit a été fabriqué par ou pour le compte de Sony Corporation, 1-7-1 Konan Minato-ku Tokyo, 108-0075 Japon. Toutes les questions relatives à la conformité des produits basées sur la législation européenne doivent être adressées à son représentant, Sony Deutschland GmbH, Hedelfinger Strasse 61, 70327 Stuttgart, Allemagne. Pour toute question relative au Service Après-Vente ou à la Garantie, merci de bien vouloir vous référer aux coordonnées qui vous sont communiquées dans les documents « Service (SAV) » ou Garantie.

**WARNUNG**

Um die Gefahr von Bränden oder elektrischen Schlägen zu verringern, darf dieses Gerät nicht Regen oder Feuchtigkeit ausgesetzt werden.

Um einen elektrischen Schlag zu vermeiden, darf das Gehäuse nicht geöffnet werden. Überlassen Sie Wartungsarbeiten stets nur qualifiziertem Fachpersonal.

**DIESES GERÄT MUSS GEERDET WERDEN.**

**Für Kunden in Europa**

**For kundene i Norge**
Dette utstyret kan kobles til et IT-strømførdelingssystem.

**Für Kunden in Deutschland**
Entsorgungshinweis: Bitte werfen Sie nur entladene Batterien in die Sammelboxen beim Handel oder den Kommunen. Entladen sind Batterien in der Regel dann, wenn das Gerät abgeschaltet und signalisiert „Batterie leer“ oder nach längerer Gebrauchsdauer der Batterien „nicht mehr einwandfrei funktioniert“. Um sicherzugehen, kleben Sie die Batteriepole z.B. mit einem Klebestreifen ab oder geben Sie die Batterien einzeln in einen Plastikbeutel.
For the Customers in Brazil only

DESCARTE DE PILHAS E BATERIAS

Pilhas e Baterias não recarregáveis

Atenção:
Verifique as instruções de uso do aparelho certificando-se de que as polaridades (+) e (-) estão no sentido indicado. As pilhas poderão vazar ou explodir se as polaridades forem invertidas, expostas ao fogo, desmontadas ou recarregadas.

Evite misturar com pilhas de outro tipo ou com pilhas usadas, transportá-las ou armazená-las soltas, pois aumenta o risco de vazamento.

Retire as pilhas caso o aparelho não esteja sendo utilizado, para evitar possíveis danos na eventualidade de ocorrer vazamento.

As pilhas devem ser armazenadas em local seco e ventilado.

No caso de vazamento da pilha, evite o contato com a mesma. Lave qualquer parte do corpo afetada com água abundante. Ocorrendo irritação, procure auxílio médico.

Não remova o invólucro da pilha.

Mantenha fora do alcance das crianças. Em caso de ingestão procure auxílio médico imediatamente.

DESCARTE DE PILHAS E BATERIAS

Este produto contém bateria de alimentação integrada (não removível pelo usuário) que só deve ser substituída por profissionais qualificados. Ao fim da vida útil do equipamento, disponha-o em um ponto de coleta na Rede Autorizada Sony ou nas lojas Sony, de forma a garantir o tratamento adequado da bateria.

Trademark Information
“PS3” is a registered trademark of Sony Computer Entertainment Inc.

The terms HDMI and HDMI High-Definition Multimedia Interface, and the HDMI Logo are trademarks or registered trademarks of HDMI Licensing LLC in the United States and other countries.

“Blu-ray” and “Blu-ray Disc” are trademarks of Blu-ray Disc Association.

Control for HDMI is an HDMI standard mutual control function which uses the HDMI CEC (Consumer Electronics Control) specification. This projector supports DeepColor, x.v.Color, LipSync, 3D signal and computer input signal of HDMI standards. It also supports HDCP.
Precautions

On safety
- Check that the operating voltage of your unit is identical with the voltage of your local power supply.
- Should any liquid or solid object fall into the cabinet, unplug the unit and have it checked by qualified personnel before operating it further.
- Unplug the unit from the wall outlet if it is not to be used for several days.
- To disconnect the cord, pull it out by the plug. Never pull the cord itself.
- The wall outlet should be near the unit and easily accessible.
- The unit is not disconnected to the AC power source (mains) as long as it is connected to the wall outlet, even if the unit itself has been turned off.
- Do not look into the lens while the lamp is on.
- Do not place your hand or objects near the ventilation holes. The air coming out is hot.

On preventing internal heat build-up
After you turn off the power with the I/Ω (ON/STANDBY) switch, do not disconnect the unit from the wall outlet while the cooling fan is still running.

Caution
The projector is equipped with ventilation holes (intake) and ventilation holes (exhaust). Do not block or place anything near these holes, or internal heat build-up may occur, causing picture degradation or damage to the projector.

On repacking
Save the original shipping carton and packing material; they will come in handy if you ever have to ship your unit. For maximum protection, repack your unit as it was originally packed at the factory.

Safety precautions when using 3D Glasses

Warning
- Do not put the 3D Glasses in a fire.
- Do not disassemble the 3D Glasses.
- Do not use, charge, store, or leave the 3D Glasses near a fire, or in places with a high temperature, e.g., in direct sunlight, or in sun-heated cars.
- Use only the supplied USB cable.
- Do not allow water or foreign material to enter the 3D Glasses.

Safety precautions
- Use only the type of 3D glasses included with this unit. You should only use the 3D glasses for watching 3D video images. Do not use the 3D Glasses with other equipment, such as TV.
- If you observe flickering or flashing, turn off the lighting in the room.
- Not for use by children without proper adult supervision.
- Be careful not to pinch your fingers in hinges of the 3D glasses when bending the temple frames.
- Do not drop or modify these 3D glasses.
- If these glasses are broken, keep broken pieces away from your mouth or eyes.
Location of Controls

Front/Right Side

You can use the buttons on the control panel with the same names as those on the remote control to operate the projector.

Control panel

- MENU button (page 45)
- INPUT button (page 31)
- \(\uparrow/\downarrow/\leftarrow/\rightarrow\) (arrow)/\(\circ\) (enter) button (page 45)
- \(\text{I/}(\text{ON/STANDBY})\) switch (page 21)

Lens shift dials (page 21)

- LAMP/Cover indicator (page 72)
- ON/STANDBY indicator (page 20)

Remote control detector

- Zoom lever (page 23)
- Focus ring (page 23)
- Ventilation holes (exhaust) (page 14)

Note

While the ON/STANDBY indicator lights in orange, the power saving mode is on. (page 58)

IR IN connector

- AC IN socket
- HDMI 1 connector (page 25)
- HDMI 2 connector (page 25)
- INPUT A connector (page 27)
- Y Pb/Cb Pr/Cr connector (phono type) (page 26)
- 3D SYNC connector (page 28)

REMOTE connector

Connects to a computer, etc. for remote control

IR IN connector

Inputs signals to control the projector
Rear/Bottom

Location of Controls

- Ventilation holes (intake) (page 14)
- Lamp cover (page 76)
- Front feet (adjustable) (page 24)
- Filter holder (page 77)
- Ventilation holes (intake) (page 14)
- Projector suspension support attaching hole (page 90)
- 3D Sync Transmitter (page 38)
Remote Control

- **LIGHT button**
  - Illuminates the buttons on the remote control.

- **INPUT button**
  - (page 31)

- **I/ɒ (On/standby) switch**
  - (page 21)

- **REMOTE CONTROL button**
  - (page 31)

- **CALIBRATED PRESET buttons**

- **COLOR TEMP button**
  - (page 42)

- **GAMMA CORRECTION button**
  - (page 42)

- **SHARPNESS +/- button**
  - (page 51)

- **BRIGHTNESS +/- button**
  - (page 51)

- **CONTRAST +/- button**
  - (page 51)

- **3D button**
  - (page 59)

- **RCP (Real Color Processing) button**
  - (page 43)

- **REALITY CREATION button**
  - (page 50)

- **ADVANCED IRIS button**
  - (page 42)

- **INFRARED TRANSMITTER**
Connections and Preparations

This section describes how to install the projector and screen, how to connect the equipment from which you want to project the picture, etc.

Unpacking

Check the carton to make sure it contains the following items:

- Remote control (1) and Size AA (R6) manganese batteries (2)
- AC power cord (1)
- Lens cap (1)
- 3D glasses (2)
- Pouch for the 3D glasses (2)
- USB charging cable (G2551-0077-00/-01 or APY5244-010020/SONY) (1.2 m) (1)
- Operating Instructions (this manual)
- Operating Instructions for the 3D glasses (1)

Inserting the batteries into the remote control

Insert the batteries ⚪ side first as shown in the illustration. Inserting them forcibly or with the polarities reversed may cause a short circuit and may generate heat.

CAUTION
Danger of explosion if battery is incorrectly replaced.
Replace only with the same or equivalent type recommended by the manufacturer.
When you dispose of the battery, you must obey the law in the relative area or country.

ATTENTION
Il y a danger d’explosion s’il y a remplacement incorrect de la batterie. Remplacer uniquement avec une batterie du même type ou d’un type équivalent recommandé par le constructeur.
Lorsque vous mettez la batterie au rebut, vous devez respecter la législation en vigueur dans le pays ou la région où vous vous trouvez.
VORSICHT
Explosionsgefahr bei Verwendung falscher Batterien. Batterien nur durch den vom Hersteller empfohlenen oder einen gleichwertigen Typ ersetzen.
Wenn Sie die Batterie entsorgen, müssen Sie die Gesetze der jeweiligen Region und des jeweiligen Landes befolgen.

Installing batteries
Two size AA (R6) batteries are supplied for Remote Control.
To avoid risk of explosion, use size AA (R6) manganese or alkaline batteries.

Caution about handling the remote control
• Handle the remote control with care. Do not drop or step on it, or spill liquid of any kind onto it.
• Do not place the remote in a location near a heat source, a place subject to direct sunlight, or a damp room.
Step 1: Installing the Projector

The projector displays pictures output from a VCR or other device. The lens shift allows you to have broader options for placing the projector and viewing pictures easily.

Installing the projector in such a location may cause a malfunction of the unit due to moisture condensation or rise in temperature.

**Before Setting Up the Projector**

**Unsuitable installation**

Do not place the projector in the following situations, which may cause malfunction or damage to the projector.

**Poorly ventilated location**

Leave space of more than 30 cm (11 7/8 inches) around the unit.

**Hot and humid**

Locations subject to direct cool or warm air from an air-conditioner

Malfunction of the sensor may occur.

**Very dusty and extremely smoky locations**

Install in a location away from walls

To maintain the performance and reliability of the projector, allow at least 30 cm (11 7/8 inches) between the projector and walls.
Improper use
Do not do any of the following while using the projector.

Blocking the ventilation holes (intake or exhaust)

Avoid using the projector tilted at an angle of more than 15 degrees.
Do not install the projector anywhere other than on a level surface or on the ceiling.
Installing the projector in such a location may result in uneven color uniformity or reduce the reliability of the effects of the lamp.
If the projector is tilted up or down, the image on the screen may be trapezoidal.
Position the projector so that the lens is parallel to the screen (page 19).

When installing the unit at altitudes
When using the projector at an altitude of 1,500 m or higher, set “Cooling Setting” in the Setup menu to “High” (page 57).
Failing to set this mode when using the projector at high altitudes could have adverse effects, such as reducing the reliability of certain components.

Tip
For details on the location of the ventilation holes (intake or exhaust), see “Location of Controls” (page 8).

Tilting front/rear and left/right

WARNING
When installing the unit, incorporate a readily accessible disconnect device in the fixed wiring, or connect the power plug to an easily accessible socket-outlet near the unit. If a fault should occur during operation of the unit, operate the disconnect device to switch the power supply off, or disconnect the power plug.

AVERTISSEMENT
Lors de l’installation de l’appareil, incorporer un dispositif de coupure dans le câblage fixe ou brancher la fiche d’alimentation dans une prise murale facilement accessible proche de l’appareil. En cas de problème lors du fonctionnement de l’appareil, enclencher le dispositif de coupure d’alimentation ou débrancher la fiche d’alimentation.
WARNUNG

Beim Einbau des Geräts ist daher im Festkabel ein leicht zugänglicher Unterbrecher einzufügen, oder der Netzstecker muss mit einer in der Nähe des Geräts befindlichen, leicht zugänglichen Wandsteckdose verbunden werden. Wenn während des Betriebs eine Funktionsstörung auftritt, ist der Unterbrecher zu betätigen bzw. der Netzstecker abzuziehen, damit die Stromversorgung zum Gerät unterbrochen wird.
Positioning the Projector and a screen

The installation distance between the projector and a screen varies depending on the size of the screen or whether or not you use the lens shift features.

1 Determine the installation position of the projector and screen.
You can obtain a good quality picture if you position the projector so that the center of the lens is within the area indicated in gray in the illustration.
Use the values L, x and y in the table on page 17 or 18 as a guide.

* Installation position not using lens shift (x = 0, y = 0)
** Example of installation position using lens shift (x, y)

L: Distance between the screen and the front end of the projector’s lens.

x: Horizontal distance between the center of the screen and the center of the projector’s lens.

y: Vertical distance between the center of the screen and the center of the projector’s lens.

For installation of the projector on a ceiling, see “Ceiling Installation.”
(page 90)
For details on the lens shift feature, see “Step 2: Adjusting the Picture Position.”
(page 20)

Unit: mm (inches)

To calculate the installation positions

L (minimum) = 38.1569 (1 \(\frac{1}{2}\)) × SS – 46.1543 (1 \(\frac{7}{8}\))

L (maximum) = 57.5992 (2 \(\frac{3}{8}\)) × SS – 42.3308 (1 \(\frac{3}{4}\))

y = −1.598 × x (mm or inch) + 10.8204 (1 \(\frac{1}{2}\)) × SS
2 Position the projector so that the lens is parallel to the screen.

3 Project an image on the screen and adjust the picture so that it fits the screen. ([page 20])

Note
When using a screen with an uneven surface, stripes pattern may rarely appear on the screen depending on the distance between the screen and the projector or the zooming magnifications. This is not a malfunction of the projector.
Step 2: Adjusting the Picture Position

Project an image on the screen and then adjust the picture position.

Tip
The I/O (ON/STANDBY), INPUT, MENU, and ↑/↓/←/→/○ (joystick) buttons on the side panel of the projector function the same as those on the remote control.

Note
Depending on the installation location of the projector, you may not control it with the remote control. In this case, point the remote control to the screen instead of the projector.

1 After connecting the AC cord to the projector plug the AC cord into a wall outlet.
   The ON/STANDBY indicator lights in red and the projector goes into standby mode.
2 Press the I/O (ON/STANDBY) switch to turn on the projector.
The ON/STANDBY indicator flashes in green, and then lights in green.

3 Display a test signal for performing adjustments.
Press the PATTERN button on the remote control to display the test signal.

Tip
Press the PATTERN button to clear the test signal display.

4 Move both lens shift dials to adjust the picture position.
To adjust the horizontal position
Turn the lens shift dial right or left.
The picture projected on the screen moves right or left by a maximum of 25% of the screen width from the center of the lens.

```
25%  1 screen width  25%
```

Top view

- : Picture position when moving the picture to the left at maximum
- : Picture position when moving the picture to the right at maximum

To adjust the vertical position
Turn the lens shift dial up or down.
The picture projected on the screen moves up or down by a maximum of 71% of the screen height from the center of the lens.

```
71%  1 screen height  71%
```

Side view

- : Picture position when moving the picture upward at maximum
- : Picture position when moving the picture downward at maximum
Connections and Preparations

Notes
- The range to move the picture projected on the screen can be adjusted only within the octagon area illustrated below. In this connection, see “Positioning the Projector and a screen” (page 16) as well.

- When you use both the horizontal and vertical lens shift features at the same time, the distance the picture projected on the screen moves differ depending on how much the lens shift is adjusted. For details, see the table on page 17 or 18.

5 Adjust the picture size using the zoom lever.

6 Adjust the focus using the focus ring.
**To adjust the tilt of the installation surface**
If the projector is installed on an uneven surface, use the front feet (adjustable) to keep the projector level.

![Diagram showing how to adjust the tilt](image)

**Notes**
- Pointing the projector at too high or too low of a tilt will result in trapezoidal distortion in the projected image.
- Be careful not to catch your finger when turning the front feet (adjustable).

**Lens Focus adjustment window (test pattern)**

![Diagram of the lens focus adjustment window](image)
Step 3: Connecting the Projector

When making connections, be sure to do the following:

- Turn off all equipment before making any connections.
- Use the proper cables for each connection.
- Insert the cable plugs properly; poor connection at the plugs may cause a malfunction or poor picture quality. When pulling out a cable, be sure to pull it out from the plug, not the cable itself.
- Refer to the operating instructions of the connected equipment.

Connecting to a VCR

To connect to equipment with HDMI output connectors

You can enjoy better picture quality by connecting a DVD player/recorder, Blu-ray Disc player/recorder, or PS3® equipped with HDMI output to the HDMI input of the projector. Moreover, if you have a Control for HDMI compatible equipment, you can operate the projector synchronizing with the Control for HDMI compatible equipment. For details, see the Function menu (page 59) and “About the Control for HDMI” (page 67).

![Diagram of connections](image)

Video signal flow:

- HDMI cable (not supplied)

When using an HDMI cable, be sure to use a Sony HDMI cable or another cable that has the HDMI logo.
Notes

- Use a high-speed HDMI cable. With a standard HDMI cable, images of 1080p, DeepColor, and 3D video images may not be displayed properly.
- When connecting an HDMI cable to the projector, make sure the ▼ mark on the upper part of the HDMI input of the projector and the ▲ mark on the connector of the cable is set at the same position.
- If the picture from equipment connected to the projector with an HDMI cable is not clear, check the settings of the connected equipment.

To connect to equipment with component video output connectors

![Component video cable (not supplied)](image)

: Video signal flow
Connecting to a Computer

Notes

- Use a high-speed HDMI cable. With a standard HDMI cable, images of 1080p, DeepColor, and 3D video images may not be displayed properly.
- When connecting an HDMI cable, make sure the ▼ mark on the upper part of the HDMI input of the projector and the ▲ mark on the connector of the cable is set at the same position.
- If you set your computer, such as a notebook type, to output the signal to both computer’s display and this equipment, the picture of the equipment may not appear properly. Set your computer to output the signal to only the external monitor. For details, refer to the computer’s operating instructions supplied with your computer. For settings of the computer, consult with the manufacturer of the computer.
- If the picture from equipment connected to the projector with an HDMI cable is not clear, check the settings of the connected equipment.
Connecting to a 3D Sync Transmitter

This unit incorporates a 3D Sync Transmitter. Depending on the installation environment of the unit, the 3D glasses may not receive 3D signals properly from the unit’s built-in 3D Sync Transmitter. In this case, connect an optional 3D Sync Transmitter and place it near your viewing position.

Tip
Place the optional 3D Sync Transmitter directly facing the 3D glasses. Also, in order to stabilize operation of the 3D glasses, it is recommended that you place the 3D Sync Transmitter near your viewing position.

CAUTION
Be sure to use straight-type LAN cable of up to 15 m labeled TYPE CM, and do not use an extension cord.

Notes
- The 3D SYNC connector is dedicated for the optional 3D Sync Transmitter. Do not connect computers or other network devices, to avoid malfunction.
- You can use a 3D Sync Transmitter separate from this unit, using an optional LAN cable (straight-type).
  If the usage environment has interference of a continuous specific frequency, synchronization of 3D image signals and the 3D glasses may be lost. In this case, use a LAN cable labeled Category 7. When watching 3D images in an environment that has even more interference, use the internal transmitter.
- Be sure to use cable of up to 15 m, and do not use an extension cord. Also, keep the LAN cable away from any AC power cords as much as possible.
- Only one 3D Sync Transmitter should be connected to the unit. Connecting multiple 3D Sync Transmitters may cause a malfunction.
- When connected to the 3D Sync Transmitter, the built-in 3D Sync Transmitter feature of the unit will turn off. You cannot use both at the same time.
Step 4: Selecting the Menu Language

You can select one of 16 languages for displaying the menu and other on-screen displays. The factory default setting is English. To change the current menu language, set the desired language with the menu screen.

1) Press MENU.
   The menu appears.

2, 3, 4
   (arrow)/(enter) buttons

1 MENU button
2 Press \( \uparrow/\downarrow \) to select the Setup menu, and press \( \rightarrow \) or \( \odot \). The setting items of the selected menu appear.

3 Press \( \uparrow/\downarrow \) to select “Language,” and press \( \rightarrow \) or \( \odot \).

4 Press \( \uparrow/\downarrow/\leftarrow/\rightarrow \) to select a language, and press \( \odot \). The menu changes to the selected language.

To clear the menu
Press MENU.
Projecting

This section describes how to operate the unit to view the picture from the equipment connected to the unit. It also describes how to adjust the quality of the picture to suit your taste.

Projecting the Picture

1. Power on both the projector and the equipment connected to the unit.
2. Press INPUT to display the input palette on the screen.
3. Select the equipment from which you want to display images.

Press INPUT repeatedly or press ↑/↓/↑ (enter) to select the equipment from which to project.

<table>
<thead>
<tr>
<th>To view the picture from</th>
<th>Press INPUT to display</th>
</tr>
</thead>
<tbody>
<tr>
<td>RGB equipment connected to the INPUT A connector</td>
<td>Input-A</td>
</tr>
<tr>
<td>Component equipment connected to the Y Pb/Cb Pr/Cr connector</td>
<td>Component</td>
</tr>
<tr>
<td>Equipment connected to the HDMI 1 connector</td>
<td>HDMI 1</td>
</tr>
<tr>
<td>Equipment connected to the HDMI 2 connector</td>
<td>HDMI 2</td>
</tr>
</tbody>
</table>

**Tips**
- When “Auto Input Search” is set to “On” in the Function menu, only input terminals with effective signals are displayed in the input palette.
- When “Status” is set to “Off” in the Setup menu, the input palette does not appear. Press of the INPUT button to switch between input terminals in sequence.
- When the “Control for HDMI” is set to “On” in the Function menu, the input terminal with effective signals is automatically displayed, synchronizing with the operation of the equipment connected to HDMI 1 or HDMI 2 input of the unit. (Only when the connected equipment supports Control for HDMI compatible.)
Turning Off the Power

1 Press the I/◊ (ON/STANDBY) switch.
   A message “POWER OFF?” appears on the screen.

2 Press the I/◊ (ON/STANDBY) switch again before the message disappears.
   The ON/STANDBY indicator flashes in green and the fan continues to run to reduce
   the internal heat. First, the ON/STANDBY indicator flashes quickly, during which
   you will not be able to light up the lamp with the I/◊ (ON/STANDBY) switch.

   The fan stops and the ON/STANDBY indicator changes from flashing green to
   remaining red.

   The power is turned off completely, and you can disconnect the power cord.

   **Note**
   Never disconnect the power cord while the indicator is flashing.

   You can turn off the projector by holding the I/◊ (ON/STANDBY) switch for about 1
   second, instead of performing the above steps.
Selecting the Aspect Ratio According to the Video Signal

You can select an aspect ratio best suited for the video signal received.

Press ASPECT.
Each time you press the button, you can select the “Aspect” setting. You can also select it using the menu. (☞ page 55)

<table>
<thead>
<tr>
<th>Original image</th>
<th>Recommended setting and resultant images</th>
</tr>
</thead>
<tbody>

<td>V Stretch</td>
</tr>
</tbody>
</table>

When using an anamorphic lens
### Selectable aspect modes vary depending on the input signal.
- You can adjust the vertical position of the picture with “V Center” and “Vertical Size” in the Screen menu only when “Aspect” is set to “Zoom.” ( page 56)

### Notes on switching the “Aspect” setting
- Select the aspect mode taking into account that changing the aspect ratio of the original picture will provide a different look from that of the original image.
- Note that if the unit is used for profit or for public viewing, modifying the original picture by switching the aspect may constitute an infringement of the rights of authors or producers, which are legally protected.

<table>
<thead>
<tr>
<th>Original image</th>
<th>Recommended setting and resultant images</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image1" alt="16:9" /></td>
<td><strong>Squeeze</strong></td>
</tr>
<tr>
<td><img src="image2" alt="16:9" /></td>
<td>When using an anamorphic lens</td>
</tr>
<tr>
<td><img src="image3" alt="16:9" /></td>
<td><strong>Normal (When a computer signal is input)</strong></td>
</tr>
<tr>
<td><img src="image4" alt="16:9" /></td>
<td><strong>Full (When a computer signal is input)</strong></td>
</tr>
</tbody>
</table>

**Notes**
- Selectable aspect modes vary depending on the input signal.
- You can adjust the vertical position of the picture with “V Center” and “Vertical Size” in the Screen menu only when “Aspect” is set to “Zoom.” ( page 56)
Watching 3D Video Images

You can enjoy powerful 3D video images, such as from 3D games and 3D Blu-ray Discs, using the supplied 3D glasses.

1 **Turn on the HDMI equipment for 3D compatibility connected to the unit, then play the 3D content.**
   For details on how to play 3D content, refer to the operating instructions for the connected equipment.

2 **Turn on the unit and project the 3D video image onto the screen.**
   For details on how to project the image, see “Projecting the Picture” (page 31).

3 **Turn on the 3D glasses, and then put them on so that they fit comfortably.**
   For details on how to use the 3D glasses, see “Using the 3D Glasses” (page 37).

**Tips**
- The factory default setting for “2D-3D Display Sel.” is “Auto.” to allow projecting 3D video images automatically when the projector detects 3D signals.
- To convert 3D video images to 2D video images, set “2D-3D Display Sel.” to “2D” (page 59).

**Notes**
- It may not be possible to display 3D video image, depending on the type of signal. Set the “2D-3D Display Sel.” to “3D,” and “3D Format” to “Side-by-Side” or “Over-Under” to suit the format of the 3D content you want to watch (page 59).
- Use the 3D glasses within the communication range (page 38).
- You can watch 3D video images only when signals from HDMI input. When connecting 3D equipment such as a 3D game or 3D Blu-ray player to the unit, use an HDMI cable.
- There are differences in perception of 3D video images among individuals.
- When the temperature of the usage environment is low, the 3D effect may be diminished.

**Adjusting/Setting the 3D functions using the menu**
Press the 3D button on the remote control to adjust the 3D settings in “3D Settings” in the Function menu. For details, see “3D Settings” (page 59).
Using the Simulated 3D Function

You can convert normal 2D video images to 3D video images.

Tip
For details on how to operate the on-screen menu, see “Operation through the Menus” (page 45).

1 Display the Function menu and select “3D Settings.”
2 Set “2D-3D Display Sel.” to “3D,” then press to display “3D Format.”
3 Set “3D Format” to “Simulated 3D” (page 59).

Tip
Use the supplied 3D glasses.

Notes
- “2D-3D Display Sel.” cannot be set to “3D” for some video sources. For available 3D signals, see “Compatible 3D Signals” (page 85).
- The simulated 3D feature may have limited effect, depending on the video source.
- There are differences in perception of 3D video images converted by the simulated 3D function among individuals.

Using the 3D Glasses

The 3D glasses receive signals sent by the 3D Sync Transmitter built into the front of the unit, which are reflected to the glasses from the screen. When watching 3D video images using the 3D glasses, face squarely toward the screen.

1 Press the power button on the 3D glasses.
   The LED indicator lights up in green.
2 Put on the 3D glasses.
3 Turn toward the screen.

Precautions for use
The 3D glasses receive infrared signals sent by the 3D Sync Transmitter built into the front of the unit, which are reflected to the glasses from the screen. Misoperation may occur if:
- The 3D glasses do not face the screen
- There are objects blocking the path between the 3D glasses and the screen
- The viewing position is too far from the screen or the distance between the unit and screen is too great
There are other infrared communication devices nearby

3D glasses communication range
Figures A and B below indicate the communication range of the 3D glasses. If you try to watch 3D video images from a distance greater than the communication range or install the projector outside the communication range, the 3D glasses may not be able to display the images properly. Also, the viable angles and distance vary depending on the screen type, environment of the room, and installation environment of the projector.

Figure A: 3D glasses communication range (distance from the screen)

![Diagram of 3D glasses communication range](image)

Note
A 3D sync signal is projected towards the screen from 3D Sync Transmitter at the front of this unit. (Figure C)
Installation conditions may prevent 3D sync signals from reaching the screen; for example, an obstruction in front of the unit.
When projecting downward from a unit that is recessed, if the unit is not installed on the ceiling, the signal from the 3D Sync Transmitter may not be projected properly to the screen, and the 3D glasses will not operate normally. (Installation A)

Install the unit with its lens at the edge of, or outside of, the recess (Installation B).

Alternatively, use the optional 3D Sync Transmitter. (page 28)
Selecting the Picture Viewing Mode

You can select the picture viewing mode that best suits the type of video source or room conditions.
You can save and use different preset modes for 2D/3D respectively.

Press one of the CALIBRATED PRESET buttons.

Using “ImageDirector3” to Adjust the Picture Quality

By using the “ImageDirector3,” you can make the desired gamma correction from a computer connected to the unit. Connect the REMOTE connector of the unit with a computer and start-up “ImageDirector3” on the computer.

For details on how to use “ImageDirector3,” refer to the Help in “ImageDirector3.”

Notes

- You need to install the “ImageDirector3” on a computer beforehand. “ImageDirector3” can be downloaded from the Sony website.
  http://esupport.sony.com/US/p/select-system.pl
  http://www.pro.sony.eu/pro/article/projectors-home-cinema-article
- When connecting the REMOTE connector with a computer, connect while the power of the computer and the unit is off.
- You cannot adjust the picture quality when “Gamma Correction” in the Picture menu is set to “Off”.
- When you set “Gamma Correction” in the Picture menu to 1.8, 2.0, 2.1, 2.2, 2.4, or 2.6, “ImageDirector3” displays Gamma 1, Gamma 2, Gamma 3, Gamma 4, Gamma 5, or Gamma 6, respectively.
- If you use “ImageDirector3” while a 3D video image is displayed or a 3D signal is input, the image may be distorted.
Adjusting the Picture Quality

You can easily adjust the picture quality that suits your taste by selecting the adjustment items with the remote control. The adjusted data can be stored in each calibrated preset mode.

Selecting to Directly Adjust the Desired Menu Item

The following menu items can be adjusted by using the buttons on the remote control.

“Motion Enhancer”

“Color Temp.”

“Color Space”

“Advanced Iris”

“Reality Creation”

“Gamma Correction”

Press the following buttons of the desired menu item repeatedly to adjust the picture quality to suit your taste. For details on each menu item, see the Picture menu. (☞ page 49)
Adjusting the Picture Using Real Color Processing

The Real Color Processing (RCP) feature allows you to adjust the color, hue, and brightness of each target of the projected picture you specify independently. You can thus obtain a picture more suitable to your taste.

Tip
Freeze the scene of the video source when you are adjusting the picture using Real Color Processing.

1 Press RCP on the remote control.

2 Press ↑/↓ to select “User 1,” “User 2” or “User 3,” then press →.

The RCP (Real Color Processing) window appears.

3 Select the target color you want to adjust.

Repeat steps 1 and 2 described below to specify the target color.

1 Press ↑/↓ to select “Color Select,” then press ←/→ to select the color you want to adjust among “Red,” “Yellow,” “Green,” “Cyan,” “Blue” and “Magenta.”

Only the portions that correspond to the specified color will be colored and the other portions will be displayed in black and white. The reference palette in the RCP window also shows the adjustable colors. Select the desired setting to adjust the color on the projected image using the reference palette as a guide.
2 Press ↑/↓ to select “Position” or “Range,” and specify it more delicate color position and color range you want to adjust using ←/→.

4 Adjust the color of the specified portions.
   Press ↑/↓ to select “RCP Color,” “RCP Hue” or “RCP Brightness,” then adjust the color or hue of the portions selected in step 3 to suit your taste using ←/→ while watching the projected picture. The picture is returned to normal color during adjustment.

5 After the adjustment is complete, press +.
   The RCP window disappears and the picture of step 2 returns.

   Tip
   There are some limitations on selection of position and range.

6 Press RCP.
This section describes how to make various adjustments and settings using the menus.  

**Note**  
The menu displays used for the explanation may be different from the actual menu display.

---

**Operation through the Menus**

The projector is equipped with an on-screen menu for making various adjustments and settings. Some of the adjustable/setting items are displayed in a pop-up menu, in a setting menu or adjustment menu with no main menu, or in the next menu window. If you select an item name followed by an arrow (►), the next menu window with setting items appears. To change the on-screen menu language, see “Step 4: Selecting the Menu Language.” (☞ page 29)
1 Press MENU.
   The menu window appears.

2 Press ↑/↓ to select a menu item, and press → or +.
   The items that can be set or adjusted with the selected menu appear. The item presently selected is shown in white.
Using the Menus

3 Press ‹/› to select an item you want to set or adjust and press ➔ or ◀.

The setting items are displayed in a pop-up menu, in a setting menu, in an adjustment menu or in the next menu window.
4 Make the setting or adjustment of an item.

When changing the adjustment level
To increase the value, press ↑/➡️. To decrease the value, press ↓/⬅️. Press ⬤ to restore the original screen.

When changing the setting
Press ↑/➡️ to change the setting. Press ⬤ to restore the original screen. You can restore the original menu screen using ← depending on the selected item.

Items that cannot be adjusted
Adjustable items differ depending on the input signal. The items that cannot be adjusted or set do not appear in the menu. (☞ page 83)

To clear the menu
Press MENU.

To reset the picture that has been adjusted
Select “Reset” from Picture menu.

When the screen display appears, select “Yes” using ← and press ⬤. All of the following settings are reset to its factory preset value.

To reset the items that have been adjusted
Select an item in the Menu screen, and display the pop-up menu, the setting menu, and the adjustment menu. Press the RESET on the remote control to reset only the selected settings to its factory preset value.

Note
RESET button on the remote control is available only when the adjustment menu or the setting menu is selected.
Picture Menu

The Picture menu is used for adjusting the picture.

```
<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Calib. Preset</td>
<td>You can select the picture viewing mode that best suits the type of video source or the environment. You can save and use different preset modes for 2D/3D respectively.</td>
</tr>
<tr>
<td>Cinema Film 1</td>
<td>Picture quality suited to reproducing the highly dynamic and clear images typical of master positive film.</td>
</tr>
<tr>
<td>Cinema Film 2</td>
<td>Picture quality suited to reproducing the rich tone and color typical of a movie theater.</td>
</tr>
<tr>
<td>Reference</td>
<td>A picture quality setup suitable for when you want to reproduce faithfully the original image quality, or for enjoying image quality, without any adjustment.</td>
</tr>
<tr>
<td>TV</td>
<td>Picture quality suited for watching TV programs, sports, concerts, etc.</td>
</tr>
<tr>
<td>Photo</td>
<td>Ideal for projecting still images taken with a digital camera.</td>
</tr>
<tr>
<td>Game</td>
<td>Picture quality suited to gaming, with well-modulated colors and fast response.</td>
</tr>
<tr>
<td>Bright Cinema</td>
<td>Picture quality suited for watching movies in a bright environment, such as a living room.</td>
</tr>
<tr>
<td>Bright TV</td>
<td>Picture quality suited for watching TV programs, sports, concerts, and other video images in a bright environment, such as a living room.</td>
</tr>
<tr>
<td>User</td>
<td>You can adjust the picture quality to suit your taste, and save the setting. The factory default setting is the same as “Reference.”</td>
</tr>
</tbody>
</table>

Tip
Any adjustments to picture quality settings are saved for each input.

Reset
Resets all currently selected Calib. Preset mode settings to their default values (page 48).

Tip
Reset does not affect settings saved for the Custom 1 to 5 items of “Color Temp.” To reset Gain or Bias in Custom 1 to 5, use the RESET button on the remote control on the Gain or Bias setting screen.

Note
These items may not be available, depending on the type of input signal. For details, see “Input Signals and Adjustable/Setting Items” (page 83).

Item names in brackets represent those printed on the remote control.
### Reality Creation  
**[REALITY CREATION]**

Adjusts the detail and noise processing of images. (Super-resolution function)

**On:** Applies detail and noise processing effects.
- **Resolution:** When you increase the setting value, the texture and detail of the picture become sharper.
- **Noise Filtering:** When you increase the setting value, the noise (picture roughness) becomes less prominent.

**Test:** **On/Off:** Changes “On” and “Off” at a certain frequency to check the effect of “Reality Creation.”

**Tip**
The display position of status during the test works together with the “Menu Position” (**page 57**) setting.
**Off:** The “Reality Creation” function is not applied.

### Cinema Black Pro

**Advanced Iris [ADVANCED IRIS]**

Switches the iris function.

**Auto Full:** Automatically adjusts to optimize the iris aperture according to the brightness level of the input source. Moreover, signal processing, which optimizes gradation expression between the peak light and dark parts, expresses a large dynamic range. This results in a bright and high contrast image.

**Auto Limited:** A lower brightness than Auto Full, making the image suitable for viewing in a dark room.

**Manual:** Manually (fixed) adjusts the iris.

**Off:** Disables the iris (aperture) function.

### Lamp Control

Switches the lamp output.

**High:** Increases the brightness, and projects brighter images.

**Low:** Decreases the brightness, and enhances blacks by minimizing brightness.

**Tip**
Setting “Low” reduces fan noise, while also reducing energy consumption for longer lamp life.

### Motionflow

**Film Projection**

Reproduces an image similar to that of projected film.

Use this setting as preferred, based on the image content.

**On:** Reduces afterimage.

**Off:** The reduction effect of afterimage is less than the “On” setting. The picture will become brighter.

**Motion Enhancer [MOTION ENHANCER]**

Reproduces fast-moving pictures smoothly without generating afterimages.

**High:** Select this for picture quality smoother than “Low.”

**Low:** Select this for smooth picture quality.

**Off:** Select this to not apply the motion enhancer function.

**Tip**
Certain scenes may contain digital signal artifacts. In this case, set this function to “Off.”
<table>
<thead>
<tr>
<th>Feature</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Contrast</strong></td>
<td><strong>CONTRAST</strong> Adjusts the contrast. Higher values increase the sharpness in images, while lower values decrease the sharpness. You can make adjustments by pressing the CONTRAST +/- on the remote control.</td>
</tr>
<tr>
<td><strong>Brightness</strong></td>
<td><strong>BRIGHTNESS</strong> Adjusts the brightness of the picture. The higher the setting, the brighter the picture. The lower the setting, the darker the picture. You can make adjustments by pressing the BRIGHTNESS +/- on the remote control.</td>
</tr>
<tr>
<td><strong>Color</strong></td>
<td>Adjusts the color density. The higher the setting, the greater the intensity. The lower the setting, the lower the intensity.</td>
</tr>
<tr>
<td><strong>Hue</strong></td>
<td>Adjusts the color tone. The higher the setting, the more greenish the picture becomes. The lower the setting, the more reddish the picture becomes.</td>
</tr>
</tbody>
</table>
| **Color Temp.** | **COLOR TEMP** Adjusts the color temperature.  
D93: Equivalent to 9,300 K color temperature normally used in TVs. Gives white colors a blue tint.  
D75: Equivalent to 7,500 K color temperature used as an ancillary standard illuminant. Gives a neutral tint between “D93” and “D65.”  
D65: Equivalent to 6,500 K color temperature used as a standard illuminant. Gives white colors a red tint.  
D55: Equivalent to 5,500 K color temperature used as an ancillary standard illuminant. Gives white colors an even redder tint.  
Custom 1 to 5: Enables you to adjust, set, and store your favorite color temperature. You can adjust Gain and Bias of RGB. 
The factory default settings are as follows.  
Custom 1: Same as “D93” color temperature setting.  
Custom 2: Same as “D75” color temperature setting.  
Custom 3: Same as “D65” color temperature setting.  
Custom 4: Same as “D55” color temperature setting.  
Custom 5: Setting that prioritizes brightness. |
<p>| <strong>Sharpness</strong>   | <strong>SHARPNESS</strong> Sharpens the outline of the picture, or reduces the noise. The higher the setting, the sharper the picture. The lower the setting, the softer the picture, thus reducing the noise. You can make adjustments by pressing the SHARPNESS +/- on the remote control. |</p>

### Color Space [COLOR SPACE]

Converting the color space.

- **BT.709**: An ITU-R BT.709 color space, which is used for high-definition television broadcast or Blu-ray Disc. The color space is equivalent to sRGB.

- **Color Space 1**: The color space suited for watching TV programs and video images, such as sport, concerts, etc.

- **Color Space 2**: The color space suited for watching TV programs, sport, concerts, and other video images in a bright environment, such as a living room.

- **Color Space 3**: The color space suited for watching movies.
Advanced Picture Menu

The Advanced Picture is used for adjusting the picture more.

**RCP (Real Color Processing)**

You can adjust the color, hue, and brightness of each selected portion of the picture independently.

**User 1, User 2, User 3:** You can adjust the picture using Real Color Processing and store the settings. Once the settings are stored, you can view the picture with the adjusted picture quality.

**Off:** Cancels this feature.

For details, see “Adjusting the Picture Using Real Color Processing”. (☞ page 43)
Screen Menu

The Screen menu is used to adjust the input signal. You can adjust the size of the picture, and select aspect mode, etc.

<table>
<thead>
<tr>
<th>Screen Menu</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Aspect</strong></td>
</tr>
<tr>
<td><strong>Over Scan</strong></td>

<tr>
<td><strong>Vertical Size</strong></td>
</tr>
<tr>
<td><strong>Adjust Signal</strong></td>
</tr>
</tbody>
</table>

**Note**

These items may not be available, depending on the type of input signal. For details, see “Input Signals and Adjustable/Setting Items” (page 83).

Item names in brackets represent those printed on the remote control.

**Aspect [ASPECT]**

Sets the aspect ratio of the picture to be displayed for the current input signal. (page 33)

- **Wide Zoom**: A 4:3 aspect ratio picture is projected naturally to fill the screen. The upper and lower portions of the picture are cropped.
- **Zoom**: A 4:3 aspect ratio picture is enlarged vertically and horizontally in the same ratio to fill the screen. The upper and lower portions are cropped. This mode is suitable to view a letterbox picture. If a movie subtitle, etc., at the bottom of the picture cannot be seen, it can be displayed by adjusting “Vertical Size” or “V Center.” (page 56)
- **Normal**: Displays a picture on the whole of the screen, maintaining the aspect ratio of the input picture. This is suitable for 16:9 or 4:3 pictures.
- **Stretch**: A picture squeezed to 4:3 is displayed in 16:9 aspect ratio.
- **V Stretch**: A 2.35:1 picture is displayed after having been changed to 16:9. This is the most suitable mode when using a commercially available anamorphic lens.
- **Squeeze**: Displays in its original aspect ratio when a 16:3 or 4:3 picture is viewed using a commercially available anamorphic lens.
- **Full**: Displays an original picture on the whole of the screen. Only when a computer signal is input.

**Notes**

- When a computer signal is input, you can only select “Normal” and “Full.”
- When the input is a 3D signal or when “2D-3D Display Sel.” in the Function menu is set to “3D”, you can only select “Normal” or “Squeeze.”
| **Over Scan** | Hides the edges of the picture.  
On: The edges of the input picture are not displayed. Select this setting when noise appears along the edge of the picture.  
Off: Projects the whole of the input picture.  
**Tip**  
To display the displayable region within the four directions of the screen, refer to “Blanking” on the Installation menu (page 63). |
| **Screen Area** | Selects the size of the picture when a Hi-Vision picture is overscanned.  
**Full**: Expands the picture on the whole of the screen.  
**Through**: Does not expand the picture on the whole of the screen. |
| **V Center** | Adjust the whole picture by moving up and down on the screen.  
As the selected number increases, the screen moves up, and as the selected number decreases, the screen moves down. |
| **Vertical Size** | Reduces or enlarges the picture vertically.  
The screen is enlarged as the setting increases and reduced as the setting decreases. If the subtitle of a movie, etc. cannot be seen, use this together with “V Center”. |
| **Adjust Signal** | You can adjust the input signal.  
**APA**: Adjusts “Phase”, “Pitch”, and “Shift” automatically to a position that suits the image signal for pictures from a computer.  
**Phase**: Adjusts the dot phase and the phase of computer signal of pictures from a computer. Adjusts the picture to the point where it looks clearest.  
**Pitch**: Adjusts the horizontal size of the picture from a computer.  
As the number increases, the picture becomes wider, and as the number decreases, the picture becomes narrower. Adjust the setting to match the number of dots of the input signal.  
**Shift**: Adjusts the position of the picture.  
**H**: As the setting for H (horizontal) increases, the picture moves to the right, and as the setting decreases, the picture moves to the left. Use ← / → to adjust the horizontal position.  
**V**: As the setting for V (vertical) increases, the picture moves up, and as the setting decreases, the picture moves down. Use ↑ / ↓ to adjust the vertical position. |
# Setup Menu

The Setup menu is used to change the factory preset settings, etc.

| Setup |  
|-------|---|
| Status | **Sets whether or not the on-screen display is displayed.**
Set to “Off” to turn off the on-screen displays except for certain menus, message when turning off the power, and warning messages. |
| Language | **Selects the language used in the menu and on-screen displays.**
Available languages are: English, Dutch, French, Italian, German, Spanish, Portuguese, Russian, Swedish, Norwegian, Japanese, Chinese (Simplified Chinese), Chinese (Traditional Chinese), Korean, Thai and Arabic. |
| Menu Position | **You can change the position to display the menu on the upper screen.**
**Bottom Left:** Displays the menu on the bottom left area of the screen.
**Center:** Displays the menu on the center of the screen. |
| Cooling Setting | **Use this item when using the projector at high altitudes.**
**High:** Use this setting when using the projector at an altitude of 1,500 m or higher.
**Standard:** Use this setting when using the projector at normal altitudes.

**Note**
When this item is set to “High”, the fan noise becomes slightly louder since the number of fan rotations increase. |
| Standby Mode | **Lowers the power consumption in standby.**
When set to “Standard”, the power consumption in standby becomes normal.
When set to “Low”, the power consumption in standby is lowered.

**Note**
When this item is set to “Low”, the “PJ Auto Power On” function is disabled (The function is set to “Off” and does not appear in the menu.). (☞ page 60) |
| Power Saving | Sets the power saving mode.  
**Lamp Cutoff:** The lamp turns off automatically and power consumption is reduced if no signal is input for 10 minutes. If signal is resumed, or any button on the control panel or remote control is pressed, the lamp will light again. In Lamp Cutoff, the ON/STANDBY indicator lights in orange. ([page 8])  
**Standby:** The power will be turned off automatically and the projector goes to Standby mode if no signal is input for 10 minutes.  
**Off:** The Power Saving mode is released. |

</tr>
<tr>
<td>HDMI Dynamic Range</td>
<td></td>
</tr>
<tr>
<td>Auto Input Search</td>
<td></td>
</tr>
<tr>
<td>Background</td>
<td></td>
</tr>
<tr>
<td>Settings Lock</td>
<td></td>
</tr>
</tbody>
</table>

**3D Settings**

- **2D-3D Display Sel.**: For Switching the video images to “2D” or “3D.”
  - **Auto**: Displays 3D video images when HDMI signals with 3D information are input. Displays 2D video images when other signals are input.
  - **3D**: Displays 3D video images according to the 3D system selected in “3D Format.” However, when HDMI signals with 3D information are input the projector, displays 3D video images according to the 3D system of the HDMI signals with 3D information.
  - **2D**: Displays 2D video images.

  * The 3D information is additional information to discriminate 3D. Some HDMI signals have additional information to discriminate 3D and some HDMI signals have none.

- **3D Format**: You can select this item by pressing on the remote control when setting “2D-3D Display Sel.” to “3D.” Set the 3D system when the input HDMI signals do not include 3D information.
  - **Simulated 3D**: Converts 2D video images to 3D video images. The setting can be made only for input the HD signals.
    - The simulated 3D feature may have limited effect, depending on the video source.
    - There are differences in perception of 3D video images among individuals.
  - **Side-by-Side**: Displays 3D images as received (before conversion to sequential) in left-right split-screen format.
  - **Over-Under**: Displays 3D images as received (before conversion to sequential) in top-bottom split-screen format.
### 3D Settings

**3D Glasses Bri’ness:** For adjusting the brightness of the picture when watching 3D video images using the 3D glasses. You can select the brightness from among “Min,” “1,” “2,” “3,” and “Max.”

**3D Depth Adjust:** For adjusting the depth of the 3D video images on the screen. The setting can be made only when a 3D Format other than “Simulated 3D” is selected.

- **Depth**
  - -2
  - -1
  - 0
  - +1
  - +2

  Front ← Normal → Depth

We recommended that “3D Depth Adjust” be set to “0.” The 3D video images may be difficult to perceive, depending on the setting of “3D Depth Adjust.”

**Simulated 3D Effect:** For adjusting the 3D effect when 2D content is converted to 3D video images. You can select the effect from among “High,” “Middle,” and “Low.”

**Notes**

- The menu display has a ghost while a 3D video image is displayed and is best viewed with the 3D glasses.
- We recommended that the screen size be 100 to 120 inches. If you watch 3D video images on a screen larger than 100 inches, the 3D effect may be diminished.

### HDMI Setting

You can change the settings of the Control for HDMI function.

**Control for HDMI:** Selects the function whether to turn the Control for HDMI function effective when the HDMI 1 and HDMI 2 connectors are connected to a Control for HDMI compatible equipment.

- When set to “On”, the following are available.
  - The operation of the projector and the connected Control for HDMI compatible equipment will synchronize with each other.
  - The Control for HDMI setting of Sony equipment (AV amplifier, video, etc.), which is compatible with “Control for HDMI - Easy Setting”*, will also be effective.

**Device Auto Power Off:** Sets whether to also turn the power of the connected Control for HDMI compatible equipment off when you turn the power of the projector off.

- When set to “On”, the equipment will synchronize and turn off when the power of the projector turns.

**PJ Auto Power On:** Select whether to link the power of the projector to the Control for HDMI compatible equipment.

- When set to “On”, the power of the projector will automatically turn on when the power of the connected equipment is turned on or when making operations such as playback.

**Note**

To enable this function, set “Standby Mode” (page 57) in the Setup menu to “Standard”, and then set “PJ Auto Power On” to “On”. For details, see “About the Control for HDMI” (page 67).
**HDMI Setting**

**Device List:** Lists all the Control for HDMI compatible equipment connected to the projector. When “Enable” is selected, the Control for HDMI setting of Sony equipment (AV amplifier, video, etc.), which is compatible with “Control for HDMI - Easy Setting”, will also be effective.

<table>
<thead>
<tr>
<th>Device List</th>
</tr>
</thead>
<tbody>
<tr>
<td>Input: Device</td>
</tr>
<tr>
<td>HDMI 1: Player 1</td>
</tr>
<tr>
<td>HDMI 2: Player 2</td>
</tr>
</tbody>
</table>

Would you like to enable for HDMI settings for connected devices? Before enabling settings, turn on the devices. For unrecognized devices, check settings on their side.

Enable

*“Control for HDMI - Easy Setting” is a function that makes the Control for HDMI setting of equipment connected to HDMI input of the projector effective as well when the Control for HDMI setting of the projector is effective. This function is only available between compatible Sony equipment, and some equipment may not be compatible. Although some non-Sony equipment may be compatible, operation is not guaranteed for such equipment.

**HDMI Dynamic Range**

Set the video input level of HDMI 1 and HDMI 2 connectors.

- **Auto:** Sets the video input level automatically.
- **Limited:** The video input level is set for signals of 16-235.
- **Full:** The video input level is set for signals of 0-255.

**Note**

If the video output setting of the connected HDMI device is not set correctly, light and dark parts of the video may appear too light or too dark.

**Auto Input Search**

Hides input terminals that do not have signal input. When set to “On”, terminals without input signals do not appear on the input palette that appears when you press INPUT. To display all input terminals, set this to “Off”. (☞ page 31)

**Background**

Selects the background color of the screen when no signal is input. You can select “Black” or “Blue”.

**Settings Lock**

Locks menu item settings to prevent operational error. (☞ page 62)

- **Off:** Cancels the Settings Lock.
- **Level A:** Clears the display of 20 items from the menu.
- **Level B:** In addition to Level A, clears the display of a further 15 items.
# Items Locked by Settings Lock

Using the Menus

Installation Menu

The Installation menu is used for changing the installation settings.

### V Keystone
Corrects the vertical trapezoidal distortion of the picture.

- **When the bottom of the trapezoid is longer than the top ( ):**
  - Sets a lower value (– direction).
- **When the top of the trapezoid is longer than the bottom ( ):**
  - Sets a higher value (+ direction).

**Note**
Depending on the picture position adjusted with the lens shift feature, the aspect ratio of the picture may change from the original or picture distortion may occur with V Keystone adjustment.

### Image Flip
Flips the picture on the screen horizontally and/or vertically.

- **Off**: The picture does not flip.
- **HV**: Flips the picture horizontally and vertically.
- **H**: Flips the picture horizontally.
- **V**: Flips the picture vertically.

Use this item for installation for the backside projection or ceiling installation.

### Blanking
This feature allows you to adjust the displayable region within the four directions of the screen.

Select the edge to adjust by highlighting Left, Right, Top, or Bottom using the `↑` / `↓` buttons.

Adjust the amount of blanking using the `←` / `→` buttons.

**Note**
When both the “Blanking” and the “V Keystone” are adjusted at the same time, the “Blanking” cannot be adjusted correctly. When using the “Blanking”, make sure that you set the “V Keystone” to ‘0’.
**Panel Alignment**

This feature allows you to adjust the gaps in the color of characters or the picture. When set to “On”, the “Adjust Color” and the “Pattern Color” can be assigned and adjusted.

**Adjust Item:** Selects how to make adjustments from below.
- **Shift:** Shifts the whole picture and makes adjustments.
- **Zone:** Selects the desired range and makes adjustments.

**Adjust Color:** Assigns the desired color to adjust the gaps in color. Select “R” (Red) or “B” (Blue) to make adjustments based on “G” (Green).

**Pattern Color:** Select “R/G” (Red and Green) or “R/G/B” (White, all colors) when “Adjust Color” is “R” (Red). Select “B/G” (Blue and Green) or “R/G/B” (White, all colors) when the “Adjust Color” is “B” (Blue).

**Adjust:** The shift adjustment and zone adjustment of the color selected in “Adjust Color” can be made with < > / < > buttons.

**When “Shift” is selected:** Assign the settings of the horizontal direction (H) with < > buttons and the vertical direction (V) with < > buttons on the shift adjustment screen.

**When “Zone” is selected:** Select the position to adjust with < > buttons for the horizontal position (H position) and < > buttons for the vertical position (V position), then press Set.

Set the amount to adjust with < > buttons for the horizontal direction (H direction) and with < > buttons for the vertical direction (V direction). You can select the position to adjust again by pressing Set.

**Reset:** Returns to the factory settings.

**Note**
Depending on the adjustments made above, colors may become uneven or the resolution may change.
The Information menu displays the model name, serial number, the horizontal and vertical frequencies of the input signal and the cumulated hours of usage of the lamp.

- **Model name**: Displays the model name (VPL-HW50ES).
- **Serial No.**: Displays the serial number.
- **fH (horizontal frequency)**: Displays the horizontal frequency of the input signal.
- **fV (vertical frequency)**: Displays the vertical frequency of the input signal.
- **Memory No.**: Displays the preset memory number of the input signal.
- **Signal type**: Displays the type of the input signal. When input signals with 3D information are input, the type of input signals and the 3D format are displayed.
- **Lamp Timer**: Indicates how long the lamp has been turned on (total usage).

**Notes**

- fH (horizontal frequency) and fV (vertical frequency) may not be displayed depending on the input signal used on the projector.
- You cannot change the displays listed above.
About the Preset Memory No.

This projector has 31 types of preset data for input signals (the preset memory). When the preset signal is input, the projector automatically detects the signal type and recalls the data for the signal from the preset memory to adjust it to an optimum picture. The memory number and signal type of that signal are displayed in the Information menu. You can also adjust the preset data through the Screen menu. This projector also contains 20 different user memories beside the preset memories used for inputting analog computer signals. You can save input signals that have not been preset on these user memories.

When an unpreset signal is input for the first time, a memory number is displayed as 0. When you adjust the data of the signal in the Screen menu, it will be registered to the projector. If more than 20 user memories are registered, the newest memory always overwrites the oldest one.

See the chart on page 81 to find if the signal is registered to the preset memory.

Note
When the aspect ratio of input signal does not match the screen size, a part of the screen is displayed in black.
This section describes about the other functions, how to solve the problems, how to replace the lamp and air filter, etc.

**About the Control for HDMI**

**What is the Control for HDMI?**
Control for HDMI is an HDMI standard mutual control function which uses the HDMI CEC (Consumer Electronics Control) specification. By connecting a variety of Control for HDMI compatible equipment such as a hard disk Blu-ray Disc player, a DVD player/recorder, an AV amplifier, etc. to a Control for HDMI compatible TV or a projector with an HDMI cable, the equipment connected will synchronize with the TV or the projector when either is operated.

**Using the Control for HDMI function**
- Connect and assign the settings of each equipment appropriately.
- Do not turn off the main power of the equipment.
- Set the input setting of the projector to the HDMI input which the equipment is connected.
- Check if the picture from the equipment appears appropriately on the projector.

**Connecting a Control for HDMI compatible equipment**
Use an HDMI cable to connect the projector and the Control for HDMI compatible equipment. Use a cable that has acquired the HDMI logo.

**Setting the Control for HDMI**
Be sure to assign the appropriate connections for both the projector and the Control for HDMI compatible equipment connected to the projector. For settings of the projector, see page 60. For settings of the Control for HDMI compatible equipment connected to the projector, refer to its operational instructions. When equipment that is compatible with the “Control for HDMI - Easy Setting” is connected to the HDMI input of the projector, if you turn the Control for HDMI function setting of the projector on, the Control for HDMI function setting of the connected equipment will also turn on.

**What you can do with the Control for HDMI**
- By turning on or playing back the connected equipment, the projector will turn on and the input setting will switch to the terminal of the connected equipment automatically.
- By turning the power of the projector off, the power of the connected equipment will also turn off automatically.
- By changing the language setting of the projector, the language setting of the connected equipment will also change to the same language automatically.

**Notes**
- The available functions of the Control for HDMI differ depending on each equipment. Refer to the operating instruction of each equipment.
- Some synchronization may be available with equipment of other brands with similar functions, but it is not guaranteed.
About the x.v.Color

• “x.v.Color” is a promotion name given to the products that have the capability to realize a wide color space based on the xvYCC specifications and is a trademark of Sony Corporation.
• xvYCC is an international standard of the technical specifications of the extended-gamut color space for video signals. The color gamut of xvYCC is wider than the one of sRGB that is used with the current television system.

About the simulated 3D feature

• Use the simulated 3D function taking into account that the picture will provide a different look from the original images, because this function converts the video images.
• Note that if the projector is used for profit or for public viewing, displaying 2D video images as 3D video images by converting to the simulated 3D may constitute an infringement of the rights of authors or producers, which are legally protected.
Troubleshooting

If the projector appears to be operating erratically, try to diagnose and correct the problem using the following instructions. If the problem persists, consult with qualified Sony personnel.

### Power

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Cause and Remedy</th>
</tr>
</thead>
</table>
| The power is not turned on.      | ➔ The power may not turn on if you turn the power off with I/O (ON/STANDBY) switch and turn it on again in a short time. After about 1 minute, turn the power on.  
   ➔ Close the lamp cover securely, then tighten the screws securely. (page 76)  
   ➔ Close the filter holder securely. (page 77)  
   ➔ Check warning indicators. (page 72)                                                                                                                                 |
| The power is suddenly turned off.| ➔ Check that “Power Saving” in the Setup menu is set to “Standby.” (page 58)  
   ➔ Set “Power Saving” to “Off.”                                                                                                                                 |

### Picture

<tr>
<td>Image is left on the screen. (image retention)</td>
<td>➔ When High contrast non-moving images are displayed for a long period of time, there may be some image retention on the screen. This is only a temporary condition. Turning off the power for a while will eliminate the retained image.</td>
</tr>
</tbody>
</table>

### On-screen display

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Cause and Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td>On-screen display does not appear.</td>
<td>➔ Set “Status” in the Setup menu to “On.” (☞ page 57) &lt;br&gt; ➔ Check if the ON/STANDBY indicator should light in green. The ON/STANDBY indicator flashes while the projector is starting up. Avoid using the projector until the indicator light up in green.</td>
</tr>
<tr>
<td>The model name does not disappear from the screen. Or else, the demo mode is displayed continuously.</td>
<td>➔ The display mode of the projector may be set at the time of purchase. Consult with your local dealer or qualified Sony personnel.</td>
</tr>
</tbody>
</table>

### Remote control

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Cause and Remedy</th>
</tr>
</thead>
<tbody>
<tr>
<td>The remote control does not work.</td>
<td>➔ Batteries could be weak. Replace them with new batteries. (☞ page 11) &lt;br&gt; ➔ Insert the batteries with the correct polarities. (☞ page 11) &lt;br&gt; ➔ If there is a fluorescent lamp near the remote control detector, the projector may work improperly or inadvertently. &lt;br&gt; ➔ Confirm the position of the remote control detector on the projector. (☞ page 8) &lt;br&gt; ➔ If you use the optional 3D Sync Transmitter and point it to the remote control detector of the unit, the remote control may not work properly.</td>
</tr>
</tbody>
</table>
### 3D video images

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Cause and Remedy</th>
</tr>
</thead>
</table>
| The video image does not seem like 3D video images.                    | ➔ Check if the 3D glasses are turned on (page 37).  
 ➔ Make sure that the battery in the 3D glasses is charged.  
 ➔ Check if the input source is HDMI.  
 ➔ Set “2D-3D Display Sel.” to “Auto” or “3D” (page 59).  
 ➔ Check if the input signals are compatible 3D signals (page 85).  
 ➔ If no 3D signal is input from the 3D equipment connected to the projector, restarting the connected 3D equipment may solve the problem.  
 ➔ When the viewing or projector position is too far from the screen, the 3D glasses may not be able to display the images properly (page 38).  
 ➔ If you use the optional 3D Sync Transmitter, check that it is placed within the specified range (page 28).  
 ➔ The screen size is not appropriate. Set the zooming magnification to low or watch the image from farther away from the screen (page 91). |

### Others

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Cause and Remedy</th>
</tr>
</thead>
</table>
| The fan is noisy.                                                      | ➔ Check the setting of “Cooling Setting” in the Setup menu. (page 57)  
 ➔ Make sure that the room temperature is not too high.  
 ➔ Check the installation conditions. (page 13)  
 The number of fan rotation increases to maintain the product reliability of the projector’s components in a room, where the temperature is higher than normal. The fan noise becomes slightly louder. The approximate normal temperature is 25°C. |
| The lens shift cannot be adjusted.                                     | ➔ The lens shift cannot be adjusted over the range of movement. Adjust the lens shift within the range of movement (pages 16, 23).                                                                                     |
| The projector and connected equipment turn On/Off, play back, and operate at the same time. | ➔ “Control for HDMI”, “Device Auto Power Off”, and “PJ Auto Power ON” are set to “On”. Set them to “Off”. For details, see “HDMI Setting” (page 60).                                                               |
The ON/STANDBY or LAMP/COVER indicator lights up or flashes if there is any trouble with your projector.

### Warning Indicators

<table>
<thead>
<tr>
<th>Symptom</th>
<th>Cause and Remedy</th>
</tr>
</thead>
</table>
| LAMP/COVER flashes in red. (A repetition rate of 2 flashes) | ➔ Close the lamp cover securely, then tighten the screws securely. ([page 76](#))
 ➔ Close the filter holder securely. ([page 77](#)) |
| LAMP/COVER flashes in red. (A repetition rate of 3 flashes) | ➔ The lamp has reached the end of its useful lifespan. Replace the lamp. ([page 75](#))
 ➔ The lamp has reached a high temperature. Wait until the lamp cools, and then turn on the power again. |
| ON/STANDBY flashes in red. (A repetition rate of 4 flashes) | ➔ The fan is broken. Consult with qualified Sony personnel.                                           |
| ON/STANDBY flashes in red. (A repetition rate of 2 flashes) | ➔ The internal temperature is unusually high. Check to ensure that if nothing is blocking the ventilation holes or whether or not the projector is being used at high altitudes. |
| ON/STANDBY flashes in red. (A repetition rate of 6 flashes) | ➔ Press the I/Ô (ON/STANDBY) switch to turn on the projector. If the power is not turned on, disconnect the AC power cord, then confirm the ON/STANDBY lamp is turned off. After about 10 seconds, reconnect the AC power cord and turn on the power again. If the indicators still light up, the electrical system has a problem. Consult with qualified Sony personnel. |

### Note

When a warning indicator other than the above starts flashing, and the symptom persists even after carrying out the above methods, consult with qualified Sony personnel.

Replacing the Lamp and the Air Filter and Cleaning the Ventilation Holes (intake)

Tools you need to get started:
- Projector Lamp LMP-H202 (optional)
- Standard Phillips screwdriver
- Cloth (for scratch protection)

The lamp used for the light source has a certain lifespan. When the lamp dims, the color balance of the picture becomes strange, or “Please replace the Lamp/Filter.” appears on the screen, the lamp may be exhausted. Replace the lamp with a new one without delay.

Use an LMP-H202 Projector Lamp as the replacement lamp.
The air filter is supplied with the LMP-H202 Projector Lamp. When you replace the lamp, it is also time to replace the air filter.
Whenever you replace the lamp, be sure to replace the air filter with a new one. Also clean the ventilation holes (intake).

Caution
- The lamp remains hot after the projector is turned off with the I/\(\) (ON/STANDBY) switch. If you touch the lamp, you may burn your fingers. When you replace the lamp, wait for at least 1 hour for the lamp to cool.
- Do not touch the surface of the lens. If you touch it, wipe off the fingerprints with a soft cloth.
- Pay special attention to replacing the lamp when the projector is installed on the ceiling.
- When removing the lamp unit, make sure it remains horizontal, then pull straight up. Do not tilt the lamp unit. If you pull out the lamp unit while tilted and if the lamp breaks, the pieces may scatter, causing injury.
- When you remove the air filter, be careful not to let any dust fall into the projector.
- Replacing the air filter is crucial to maintain the good performance of the projector or to prevent malfunction to it. When a warning message for replacing the air filter appears, replace the air filter immediately.

1. Turn off the projector and unplug the AC power cord.
2. When setting the projector on a flat surface such as a desk etc., put a cloth to prevent the surface from being scratched. Reverse the projector as illustrated, then place it on the cloth.

Notes
- When the lamp is damaged the broken pieces of the lamp may become scattered, if you do not reverse the projector. This may cause injury.
- Be sure that the projector is placed on a stable surface.
3 Loosen the screw on the lamp cover with a Philips screwdriver, and then open the lamp cover.

4 Loosen the 3 screws on the lamp with the Phillips screwdriver. Hold up the handle, then pull the lamp straight out.

5 Hold the handle of the new lamp and push it in securely until it reaches the end, and then tighten the 3 screws.

Note
Be careful not to touch the optical block inside the unit.

6 Close the lamp cover, then tighten the screws.
7 Remove the filter holder.

8 Remove the air filter.

9 Attach the new air filter so that it fits into each claws (10 positions) on the filter holder.

Note
Attach the air filter aligning it with the shape of the filter holder. Also, do not touch the fan after removing the air filter that is set deep inside the projector.

10 Attach the filter holder.

Note
The projector will not turn on unless the filter holder is securely closed.

11 Wipe dust off the ventilation holes (intake) with a soft cloth.

12 Place the project back on its original position.

13 Turn on the projector, then select the desired setting item on the Setup menu. The menu screen below will be appeared.

Tip
If “Settings Lock” is set to “Level B,” set to “Off” once.

14 Select “Yes”.

Caution
Do not put your hands into the lamp replacement slot, and do not allow any liquid or other objects into the slot to avoid electrical shock or fire.
Be sure to use an LMP-H202 Projector Lamp for replacement. If you use lamps other than the LMP-H202, the projector may malfunction.

Be sure to turn off the projector and unplug the power cord before replacing the lamp, then check the ON/STANDBY lamp has already been turned off.

The projector will not turn on unless the lamp is securely installed in place.

The projector will not turn on unless the lamp cover is securely closed.

To cancel a message displayed on the screen, press either the button on the remote control or the one on the control panel on the projector.

Disposal of the used lamp

For the customers in the USA
Lamp in this product contains mercury. Disposal of these materials may be regulated due to environmental considerations. For disposal or recycling information, please contact your local authorities or the Telecommunications Industry Association (www.eiae.org).

Pour les clients aux États-Unis
La lampe dans ce produit contient du mercure. La disposition de ces matériaux peut être réglementée suite à des considérations environnementales. Pour obtenir des informations de disposition ou de recyclage, veuillez communiquer avec vos autorités locales ou la Telecommunications Industry Association (www.eiae.org).

Cleaning the Air Filter

When “Please clean the filter.” appears on the screen, you should clean the air filter. The air filter should be cleaned every 1,500 hours. This value varies depending on the environment or how the projector is used. 1,500 hours are approximate.

After washing the air filter with a mild detergent solution, dry it in a shaded place.

Notes

- When you clean the air filter, make sure you do not damage it.
- For details on how to attach and remove the air filter, see “Replacing the Lamp and the Air Filter and Cleaning the Ventilation Holes (intake)” Steps 7 to 10. (☞ page 77)
- When you remove the air filter, be careful not to let any dust fall into the projector.
- Cleaning the air filter is crucial to maintain the good performance of the projector or to prevent malfunction to it. When a warning message for cleaning the air filter appears, clean the air filter immediately.

Fitting the Lens Cap

When fitting the lens cap onto the lens, position the lens cap so that the concave on the side of the lens cap will fit the zoom lever, as shown in the illustration.
Cleaning and the Screen of the Projector

Cleaning the lens
The lens surface is especially treated to reduce reflection of light. As incorrect maintenance may impair the performance of the projector, take care with respect to the following:

- Wipe the lens gently with a soft cloth such as a cleaning cloth or glass cleaning cloth.
- Stubborn stains may be removed with a soft cloth such as a cleaning cloth or glass cleaning cloth lightly dampened with water.
- Never use solvent such as alcohol, benzene or thinner, or acid, alkaline or abrasive detergent, or chemical cleaning cloth, as they will damage the lens surface.

Cleaning the cabinet
- To remove dust from the cabinet, wipe gently with a soft cloth. If dust is persistent, wipe with a soft cloth slightly moistened with a diluted mild detergent solution.
- Never use any type of abrasive pad, alkaline/acid cleaner, scouring powder, or volatile solvent, such as alcohol, benzene, thinner or insecticide.
- Using such materials or maintaining prolonged contact with rubber or vinyl materials may result in damage to the screen surface and cabinet material.

Black points and bright points (red, blue, or green) on the screen
The projector is manufactured using high-precision technology. You may, however, see tiny black points and/or bright points (red, blue, or green) that continuously appear on the projector. This is a normal result of the manufacturing process and does not indicate a malfunction.

Specifications

System
Projection system
- SXRD panel, 1 lens, projection system
- LCD panel
  - 0.61-inch (15.4 mm)
  - SXRD panel 6,220,800 pixels
  - (2,073,600 pixels × 3)

Lens
- 1.6 times zoom lens (manual)
  - f=18.7 mm to 29.7 mm
  - F2.52 to F3.02

Lamp
- 200 W Ultra High Pressure Lamp

Projection picture size
- 40 inches to 300 inches (1,016 mm to 7,620 mm) (measured diagonally)

Acceptable video signals
- 480/60i, 576/50i, 480/60p, 576/50p, 720/60p, 720/50p, 1080/60i, 1080/50i,
- The following items are available for digital signal (HDMI input) only:
  - 1080/60p, 1080/50p, 1080/24p

Acceptable computer signals
- fH: 19 kHz to 72 kHz
- fV: 48 Hz to 92 Hz
- Maximum resolution 1,920 × 1,080
  - (HDMI input only)
- For details, see “Preset Signals”. († page 81)

Input

Y Pb/CB Pr/Cr
- Component: phono type
- Y with Sync: 1 Vp-p±2 dB sync negative (75 ohms terminated)
- Pb/Cb: 0.7 Vp-p±2 dB (75 ohms terminated)
- Pr/Cr: 0.7 Vp-p±2 dB (75 ohms terminated)

HDMI
- Digital RGB/Y Cb (Pb) Cr (Pr)

INPUT A
- HD D-sub 15-pins
  - Analog RGB:
    - R: 0.7 Vp-p±2 dB (75 ohms terminated)
    - G: 0.7 Vp-p±2 dB (75 ohms terminated)
    - G with sync/Y: 1 Vp-p±2 dB sync negative (75 ohms terminated)
    - B: 0.7 Vp-p±2 dB (75 ohms terminated)
    - SYNC/H: Composite sync input: TTL level, positive/ negative
Horizontal sync input: TTL level, positive/negative
VD: Vertical sync input: TTL level, positive/negative
3D SYNC: RJ45 connector
IR IN: Minijack
REMOTE: RS-232C: D-sub 9-pins (female)

**General**

**Dimensions**
407.4 mm x 179.2 mm x 463.9 mm (16 1/8 x 7 1/8 x 18 3/8 inches) (w/h/d)

**Mass**
Approx. 10 kg (22 lb 1 oz)

**Power requirements**
- AC 100 V to 240 V, 3.0 A to 1.3 A, 50/60 Hz

**Power consumption**
- Max. 300 W
- Standby mode: 8 W
- Standby mode (low): 0.5 W

**Operating temperature**
5 °C to 35 °C (41 °F to 95 °F)

**Operating humidity**
35% to 85% (no condensation)

**Storage temperature**
-20 °C to +60 °C (−4 °F to +140 °F)

**Storage humidity**
10% to 90%

**Supplied accessories**
- Remote control RM-PJ23 (1)
- Size AA (R6) manganese batteries (2)
- AC power cord (1)
- Lens cap (1)
- 3D glasses TDG-PJ1 (2)
- Pouch for the 3D glasses (2)
- USB charging cable (G2551-0077-00/-01 or APY5244-010020/SONY) (1.2 m) (1)
- Câble de charge USB (G2551-0077-00/-01 ou APY5244-010020/SONY) (1.2 m) (1)
- Operating Instructions (1)
- Operating Instructions for the 3D glasses (1)

Design and specifications are subject to change without notice.

**Optional accessories**
- Projector Lamp LMP-H202 (for replacement)
- Projector Suspension Support PSS-H10
- 3D glasses TDG-PJ1
- 3D Sync Transmitter TMR-PJ2
The following table shows the signals and video formats which you can project using this unit. When a signal other than the preset signal shown below is input, the picture may not be displayed properly.

</tbody>
</table>

● : Adjustable/can be set  
– : Not adjustable/cannot be set  
*1: The setting can be made only when “x.v.Color” is set to “Off”.  
*2: The setting can be made only when “Over Scan” is set to “On” and “Aspect” is set to “Normal” in the Screen menu.  
*3: If the input signal is from a computer, the setting cannot be made when the aspect ratio is 16:9 or wider (fixed at “Normal”).  
*4: The setting can be made only when “Zoom” is selected in “Aspect”.  
*5: The setting can be made only for analog signal.  

**Note**  
When connecting a cable such as an HDMI cable, etc., check the type of the signal in the Information menu (page 65) and Digital signal (page 82), and check items that are adjustable/can be set.
The projector accepts the following types of 3D signals.

<table>
<thead>
<tr>
<th>Resolution</th>
<th>3D signal format</th>
</tr>
</thead>
<tbody>
<tr>
<td>720/60, 50P</td>
<td>Side-by-Side format</td>
</tr>
<tr>
<td>1080/24P</td>
<td>Over-Under format*</td>
</tr>
<tr>
<td>1080/60, 50i</td>
<td>Side-by-Side format*</td>
</tr>
<tr>
<td>1080/60, 50P</td>
<td>Side-by-Side format</td>
</tr>
<tr>
<td></td>
<td>Over-Under format</td>
</tr>
</tbody>
</table>

*: Mandatory 3D format of the HDMI standards.

### 3D Signals and Adjustable/Setting Items

Some items on the menus may not be available to adjust/set, depending on the 3D signals. The items that cannot be adjusted are not displayed on the menu. The following tables indicate those items.

<table>
<thead>
<tr>
<th>Item</th>
<th>3D signals</th>
<th>720/60, 50P</th>
<th>1080/60, 50i</th>
<th>1080/24P</th>
<th>1080/60, 50P</th>
</tr>
</thead>
<tbody>

Ceiling Installation

Use the PSS-H10 Projector Suspension Support when you install the projector on a ceiling. The projection distances for ceiling installation are shown below.

\[ L' : \text{Distance between the screen and the installation hole at the ceiling side of the ceiling mount unit (front side)} \]
\[ y' : \text{Distance between the ceiling and the center of the screen such that the picture will not be truncated or blocked} \]
When using the 16:9 aspect ratio screen size

To calculate the installation positions
L’ (minimum) = 31.1781 \( (1 \frac{1}{4}) \times SS + 137.7 \) \( (5 \frac{1}{2}) \)
L’ (maximum) = 47.0644 \( (1 \frac{7}{8}) \times SS + 130.8 \) \( (5 \frac{1}{4}) \)
y’ (minimum) = 6.2263 \( (1/4) \times SS \)
y’ (maximum) = 8.8414 \( (3/8) \times SS + 268.5 \) \( (10 \frac{5}{8}) \)

When using the 4:3 aspect ratio screen size

To calculate the installation positions
L’ (minimum) = 38.1569 \( (1 \frac{1}{2}) \times SS + 137.7 \) \( (5 \frac{1}{2}) \)
L’ (maximum) = 57.5992 \( (2 \frac{3}{8}) \times SS + 130.8 \) \( (5 \frac{1}{4}) \)
y’ (minimum) = 7.62 \( (3/8) \times SS \)
y’ (maximum) = 10.8204 \( (1/2) \times SS + 268.5 \) \( (10 \frac{5}{8}) \)
Attaching the PSS-H10 projector suspension support
For details on installation on a ceiling, refer to the Installation manual for Dealers of the PSS-H10. Make sure to consult with a qualified Sony personnel for installation. The installation measurements are shown below when installing the projector on a ceiling using the PSS-H10.

**Caution**
Do not mount the projector on the ceiling or move it by yourself. Be sure to consult with qualified Sony personnel (charged).

**To dealers**
Use the Sony PSS-H10 Projector Suspension Support, and take measures to prevent falling using wire, etc.
For details, refer to the installation manual for dealers of the PSS-H10.

**Top view**
Install the projector so that the center of the lens is parallel to the center of the screen.
