

SONY®

Enjoying 3D

Information Guide

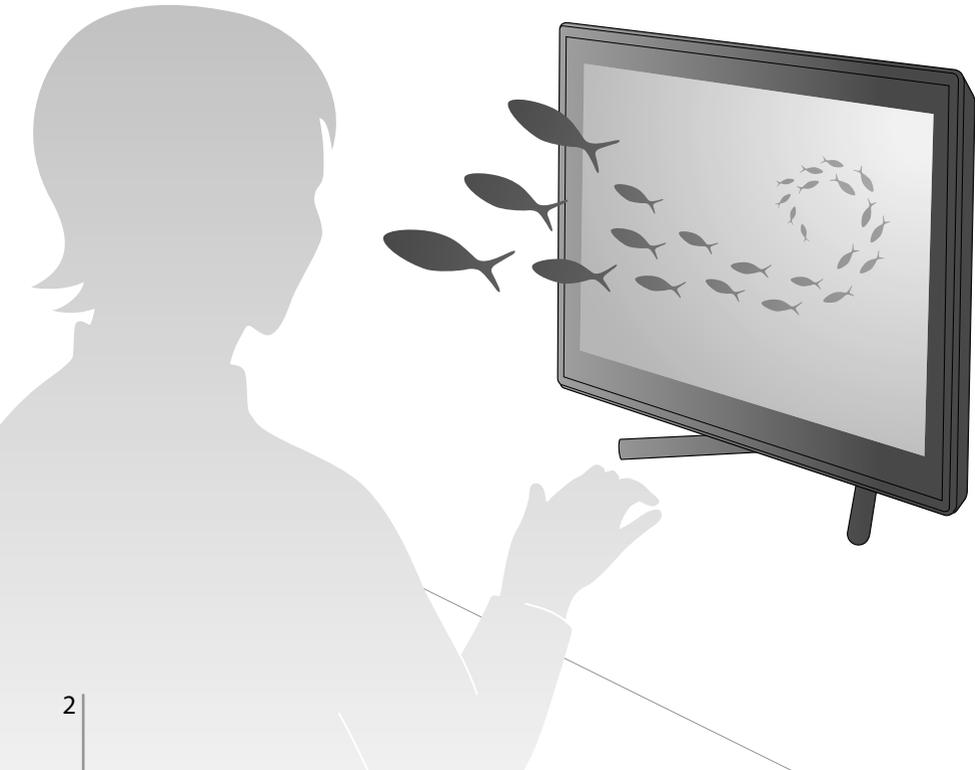

VAIO

What You Can Do with the 3D Function

This VAIO computer comes with the exciting new 3D function that allows quick and easy playback of various types of 3D content.

3D Playback

Enjoy a new 3D experience by playing various types of 3D content (such as Blu-ray 3D™ Disc media and 3D photos).

Glassless 3D

Enjoy glassless 3D with face-tracking technology for optimizing 3D image viewing.

* SuperD technology allows you to enjoy glassless 3D viewing on your computer.

Simulated 3D Function (2D to 3D Conversion)

2D to 3D conversion is an easy task for your computer. Enjoy your 2D content (such as Blu-ray Disc™ media, DVDs, and recorded videos) in simulated 3D using the simulated 3D function. (The effect applies only to images displayed on the computer screen.)

3D Output

Output 3D content to a 3D-capable TV to enjoy it on the TV screen (page 10).

3D Input

Enjoy 3D content on your computer screen by connecting a 3D-capable device (such as a video game or a camcorder) to the **HDMI INPUT** port.

Safety Information

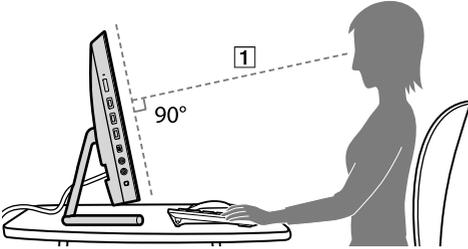

Viewing 3D images

- Be sure to follow the instructions in the manuals that came with your VAIO computer when viewing 3D images.
- Some people may experience discomfort (such as eye strain, fatigue, or nausea) while watching 3D video images or playing stereoscopic 3D games. Sony recommends that all viewers take regular breaks while watching 3D video images or playing stereoscopic 3D games. The length and frequency of necessary breaks will vary from person to person. You must decide what works best. If you experience any discomfort, you should stop watching the 3D video images or playing stereoscopic 3D games until the discomfort ends; consult a doctor if you believe necessary.
You should also see the instruction manual of any other device or software used with this computer.
The vision of young children (especially those under six years old) is still under development. Consult your doctor (such as a pediatrician or eye doctor) before allowing young children to watch 3D video images or play stereoscopic 3D games.
Adults should supervise young children to ensure they follow the recommendations listed above.
- If you see a double image or feel the 3D effect is less pronounced while viewing 3D images, stop viewing.
- Depending on the content, the degree of 3D effect can vary, or the desired 3D effect may not be achieved. Also, fatigue may be felt while watching 3D content. In this case, avoid long-term viewing. Some 3D content provides adjustment for this.

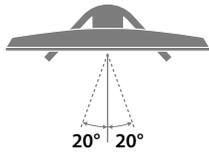

Notes on Viewing 3D Images

3D image viewing range

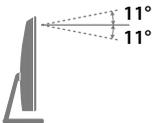

This computer optimizes 3D image viewing by face-tracking. For optimum results, the viewing distance **1** should be in the range of 2 feet (60 cm) to 3.33 feet (100 cm).

Overhead view

Side view

- Only one face can be tracked at a time. If there is more than one viewer, the 3D effect will not be possible.
- If you lie on your side, tilt your head, or wear a mask while viewing 3D images, the 3D effect may be less pronounced.
- If face-tracking cannot be performed correctly screen jitter may result.
- While viewing 3D images, if you set the screen display to OFF then ON again using the **MONITOR** power button, 3D images may not be displayed properly. In this case, you should restart the 3D-related software.

Before Using the 3D Function

Adjusting the 3D display

By adjusting the 3D display as follows, a more desirable 3D effect can be obtained.

Do not perform other operations until the adjustment is finished.

- 1 Click  (**Start**), **All Programs**, **Superd Software**, and **X-Tune** to start **X-Tune**.
- 2 Follow the on-screen instructions to adjust the 3D display.

- **X-Tune** can also be started from **VAIO Control Center**, **3D Function** and **3D Display Function Settings**.
- If the desired 3D effect is not achieved after adjustment, restart **X-Tune**, follow the instructions on the screen, then adjust again.

Selecting 3D-related software

You can quickly find and start 3D-related software you want to use from **VAIO 3D Portal**.

- 1 Click  (**Start**), **All Programs**, and **VAIO 3D Portal** to start **VAIO 3D Portal**.
- 2 Select the software you want to use.
- 3 Read the on-screen instructions to start the software.

- You can also open **VAIO 3D Portal** by clicking  from **VAIO Gate** in the upper part of your desktop.
 - The following features are also available in **VAIO 3D Portal**.
 - Playing 3D sample images
 - Displaying 3D settings window
- !
- The built-in camera is not available while using the 3D function.
 - While the 3D-related software is running, **Magic-i Visual Effects** is not available even when 3D images are not displayed.

Using the 3D Function

The 3D function on your computer allows you to play, create and edit 3D content.

The software to be used will differ, depending on the purpose and type of content.

Playing of 3D content

You can play content specially made for 3D (such as Blu-ray 3D Disc media). You can also use the simulated 3D function to view 2D content (such as DVDs and videos), in simulated 3D.

Creating and editing 3D content

You can import 2D and 3D data, then create and edit 3D content.

When you create and edit 3D content

Type of Content	Software
Painting	Family Paint 3D
Creating/editing video	PlayMemories Home / Vegas Movie Studio HD Platinum

Refer to the help file included with the software for more information.

The list of software used for the 3D function

When you play 3D content

Type of Content	Software
Blu-ray/DVD	PowerDVD BD
Video	PlayMemories Home / PowerDVD BD
Photo	PlayMemories Home / NVIDIA 3D Vision Photo Viewer

When you use the simulated 3D function

The simulated 3D function is available only while you are viewing images on the computer screen.

Type of Content	Software
Blu-ray/DVD	PowerDVD BD
Video	PlayMemories Home
Photo	PlayMemories Home

Viewing 3D Images

Playing Blu-ray 3D Disc media

- 1 Click  (**Start**), **All Programs**, **CyberLink PowerDVD BD**, and **CyberLink PowerDVD BD** to start **PowerDVD BD**.
- 2 Insert Blu-ray 3D Disc media into the optical disc drive.

- You can switch 3D images to/from 2D images by pressing the **3D** button on your computer.
- Select **S-FORCE Front Surround 3D** in the sound quality settings to enjoy more realistic 3D sound.

Viewing 3D photos or videos

- 1 Start the software that supports 3D photo or video playback.
- 2 Start 3D photo or video playback.

Converting 2D content to 3D

The simulated 3D function allows you to convert and play 2D content (such as videos) in simulated 3D just by pressing the **3D** button on your computer while you are viewing 2D content on the computer screen.

- The quality of simulated 3D may vary depending on the original 2D source content.
- When using the simulated 3D function, note that the displayed image is modified from the original due to the conversion performed by the computer.
- In **PlayMemories Home**, the operation method differs from the following procedure. Refer to the help file included with the software for more information.

- 1 Start the software that supports the simulated 3D function and the type of content you want to play.
- 2 Play content.
- 3 Press the **3D** button on your computer.

You can switch 3D images to/from 2D images by pressing the **3D** button on your computer.

Adjusting the 3D settings

You can adjust the 3D effect with the **VAIO Control Center**.

The 3D effect may not be adjustable, depending on the software.

- 1 Click  (**Start**), **All Programs**, and **VAIO Control Center**.
- 2 Click **3D Effect Settings** in the left pane of the window.
- 3 Adjust the 3D effect.
 - 3D depth adjustment**
Automatically adjusts the depth of 3D images according to the LCD screen size. This setting is available for content specially made for 3D playback (such as Blu-ray 3D Disc media).
 - Simulated 3D effect**
Adjusts the depth of 3D images converted from 2D images using the simulated 3D function.

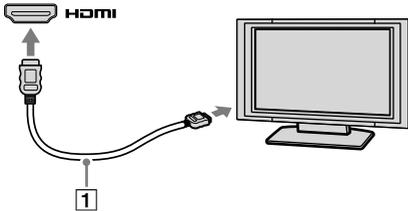

Outputting a 3D image to a 3D-capable TV

You can output a 3D image to a 3D-capable display (such as a 3D TV) by connecting the display to your computer with an HDMI cable.

Refer to the manual that came with your 3D TV for detailed information on the 3D function.

- 1 Connect an HDMI input port on a 3D TV to the **HDMI OUTPUT** port on your computer with an HDMI cable **1** (not supplied).

- 2 Change the input source of the TV to the external input.
- 3 Press the **Windows+P** keys to change the display output to only an external display.
- 4 Start the software that supports 3D photo or video playback.
- 5 Play content.

Some software may require the resolution of the external display to be changed. In this case, click  (**Start**), **All Programs**, **VAIO Control Center**, **Display**, **HDMI Resolution Settings**, and select **1080(3D)** or **720(3D)**.

To view 2D content after the settings, set the screen resolution to **1080(2D)** or **720(2D)**.

- The way to switch 3D images to 2D images differs depending on the 3D TV you are using. Refer to the manual that came with your 3D TV for detailed information.
- The **3D** button on your computer is not available while 3D images are displayed on the 3D TV.

If images are not displayed in 3D

If images are not displayed in 3D on a 3D-capable TV, follow these steps to display the initial settings wizard for NVIDIA 3D Vision on the TV screen and complete the initial settings.

- 1 Follow steps 1 to 3 in **Outputting a 3D image to a 3D-capable TV** (page 10) to output images from the computer to a 3D TV.
- 2 Right-click on the desktop and select **NVIDIA Control Panel**.
- 3 Click **Set up stereoscopic 3D**.
- 4 Click the right arrow in **Test stereoscopic 3D** and select **Run Setup Wizard**. Follow the on-screen instructions to complete the initial settings.

When connecting a 3D TV to your computer for the first time, the prompt for the initial settings wizard of NVIDIA 3D Vision will be displayed. Click **Yes** to complete the initial settings wizard.

Viewing 3D images from a 3D device on your computer screen

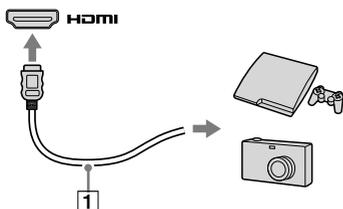

You can view 3D images from a device that supports 3D output (such as a video game) on your computer screen by connecting the device to your computer with an HDMI cable.

- 1 In **VAIO Control Center**, set to view 3D via HDMI input.

Before you change the setting, close all other running software.

- 1) Starts Windows.
 - 2) Click  (**Start**), **All Programs**, **VAIO Control Center**, **3D Function**, and **3D Display Function Settings**.
 - 3) Click to select the **Enable 3D display function** check box.
 - 4) Select **View 3D via HDMI input**, and click **Apply**.
 - 5) Click **OK**.
- 2 Connect the **HDMI INPUT** port on your computer to an HDMI output port on a 3D-capable device (such as a video game or a digital camera) with an HDMI cable  (not supplied).

- 3 Press the **INPUT/OK** button on the right side of the computer to display the input source menu.

- 4 Press the **INPUT/OK** button, then select **HDMI**.
- 5 Change the 3D output settings on the connected device to output 3D images to the computer.

- The 3D output settings vary depending on the device you use. Refer to the manual that came with the device for more information.
- 2D images from the device connected to the **HDMI INPUT** port cannot be converted to 3D images.
- The 3D effect applied to images from the device connected to the **HDMI INPUT** port cannot be adjusted.
- If you use the 3D function on your computer without using HDMI input after setting **View 3D via HDMI input**, return to the initial setting by clicking **VAIO Control Center**, **3D Function**, then **3D Display Function Settings**.
- The built-in camera is not available while 3D images are played via HDMI input.
- 3D images cannot be displayed if Windows is shut down or in sleep mode.

You can switch 3D images to/from 2D images by pressing the **3D** button on your computer.

Creating Your Original 3D Content

Creating 3D images with Family Paint 3D

- 1 Click  (**Start**), **All Programs**, **ArcSoft Family Paint**, and **Family Paint 3D** to start **Family Paint 3D**.
- 2 Select **3D Draw** in the **Home** window and **Simple mode** or **Advanced mode**.
- 3 Follow the on-screen instructions to create your original 3D content by drawing illustrations and characters or importing photos.
- 4 Click  on the right side of the window.

! Images are not displayed in 3D while you are creating 3D content even if you press the **3D** button on the computer.

Creating 3D movies with PlayMemories Home

- 1 Click  (**Start**), **All Programs**, and **PlayMemories Home** to start **PlayMemories Home**.
- 2 Select photos and/or videos to use, then click **VAIO Creation**.
- 3 Select **Create Movie**, then click **Next**.
- 4 Determine the material to be used in the movie, then click **Create a new movie**.
- 5 Select a category/theme used in the movie from the category list on the left side of the theme selection screen, then select the theme suitable for the movie from the theme list displayed on the right side. You can activate 3D by selecting the 3D theme.
- 6 Select the BGM to be used in the movie on the BGM selection screen.
- 7 The completed movie can be checked on the preview screen. When you select the 3D theme, the **3D Movie Preview Method Selection** screen is displayed. Playback 3D content on the preview screen in full screen.
- 8 Select the output method, then the movie is output.

Creating 3D movies with Vegas Movie Studio HD Platinum

- 1 Click  (**Start**), **All Programs**, **Sony**, and **Vegas Movie Studio HD Platinum 11.0** to start **Vegas Movie Studio HD Platinum 11.0**.
- 2 Select **Start Using Vegas Movie Studio** in **Welcome** screen.
- 3 Set the preferred 3D mode as follows.
 - 1) Select **Properties** in the **Project** menu.
 - 2) Click the **Video** tab.
 - 3) Select the preferred 3D mode from the **Stereoscopic 3D mode** drop-down list, then click **OK**.

To preview 3D content, select **Preferences** in the **Options** menu, then set **Stereoscopic 3D mode** to **Left and Right** on the **Preview device** tab. To start preview, click **Video Preview on External Monitor** (on the **Video Preview** screen toolbar). Press the **Esc** key on your keyboard to return to the editing screen.

- 4 Edit your project.
- 5 Click **Make Movie**, then the movie is output.

Troubleshooting

What should I do if 3D images are not displayed or the 3D effect is less pronounced on my computer screen?

- Perceived 3D effect may vary from person to person.
- When you view 3D images on your computer, press the **3D** button on the computer.
It may take a few seconds to switch 3D images after pressing the **3D** button.
- Make sure you are using the software that supports the content currently playing. You can check if the software supports the content in **The list of software used for the 3D function** (page 7).
- Click **3D Function** and **3D Display Function Settings** on the **VAIO Control Center** to check if the 3D function is enabled.
- Make sure the playback window of the software is active and displayed on the top of the screen, and press the **3D** button again.
- While viewing 3D images, if you set the screen display to OFF then ON again using the **MONITOR** power button, 3D images may not be displayed properly. In this case, you should restart the 3D-related software.
- If you lie on your side, tilt your head, or wear a mask while viewing 3D images, the 3D effect may be less pronounced.
- View in a range where face-tracking is possible (page 5).
- If no 3D effect can be achieved, try adjusting the 3D display (page 6).
- If you use the 3D function on your computer, right click on the desktop, and set the screen resolution to **1920 x 1080** in **Screen resolution**.

- If 3D images from your computer are not displayed on a 3D-capable display (such as a 3D TV), display the initial settings wizard for NVIDIA 3D Vision on the TV screen and complete the initial settings (page 10).

What should I do if 3D images do not play smoothly on my 3D TV connected to the HDMI output port?

- Check the HDMI output resolution settings on the computer. If the screen resolution is set to **1080(3D)**, 3D images may not play smoothly. In **VAIO Control Center**, change the screen resolution to **720(3D)**, then try again.

How do I disable the 3D function?

- You can disable the 3D function with **VAIO Control Center**. Open **VAIO Control Center**, and click **3D Function** and **3D Display Function Settings**.

Why does the message about NVIDIA 3D Vision in green appear on the bottom-right corner of the playback window?

- The message about NVIDIA 3D Vision may appear on the bottom-right corner of the playback window during playback depending on the software you are using. You can show/hide the message by pressing the **Ctrl+Alt+Insert** keys.

What should I do if no images are displayed on my computer screen when I play 3D content with a device, such as a 3D Blu-ray Disc player, connected to the HDMI INPUT port?

- Disconnect and reconnect the HDMI cable.
- Check the resolution settings on the connected device.
- Make sure **View 3D via HDMI input** in **VAIO Control Center** is correctly set to play 3D (page 11).
- You cannot play 3D images while Windows is shut down or in sleep mode.

What should I do if images are not displayed in 3D on my computer screen when I play 3D content with a device connected to the HDMI INPUT port?

- If your computer is connected to your 3D TV through an AV amplifier, make sure the AV amplifier supports 3D playback.
- Check the resolution settings on the connected device.
- Refer to the manual that came with the connected device and check the settings.

What should I do if images are not displayed in 3D when I watch TV on my computer? <TV tuner board installed models>

- Images are not displayed in 3D by pressing the **3D** button while watching TV on your computer. TV broadcasts cannot be displayed as 3D images on this computer.

Precautions

About the simulated 3D function

- The 3D effect may be less pronounced depending on the original images.
- When using the simulated 3D function, note that the displayed image is modified from the original due to the conversion performed by the computer.
- Use of the simulated 3D function to show converted 3D images from 2D images in cafes, hotels, or other establishments for commercial or public viewing purposes may infringe on the copyright holder's right protected by the copyright law.

Trademarks

All names of systems, products, and services are trademarks of their respective owners. In the manual, the TM or (R) marks are not specified.

For trademarks not specified in this manual, refer to the trademarks section in the on-screen **User Guide**.
